PARISHRAM 2.0 2026 (Class 12th)

Biology (Zoology)

DPP: 5

Human Reproduction

Q1 Phase of menstrual cycle that lasts for 3-5 days
(A) Follicular phase
(B) Ovulatory phase
(C) Lutealphase
(D) Menstrual phase

Q2 During the female sexual cycle, the peak of estrogen secretion is at day
(A) 6 (B) 13
(C) 22 (D) 26

Q3 Loss of reproductive capacity of women after age 40-45 years is
(A) Menstruation (B) Senescence
(C) Menopause (D) Menarche

Q4 Identify the correct statement?
(A) Menstrual cycle is present in all mammals.
(B) Menstrual cycle is present in all primates
(C) Most mammals are oviparous
(D) None of these

Q5 Match the hormone in column-I with their Function in Column-II

	Column – I		Column – II
A.	FSH	p.	Prepare endometrium for implantation
B.	LH	q.	Develops female secondary sexual character
C.	Progesterone	r.	Contraction of uterine wall
D.	Estrogen	s.	Development of corpus Luteum
		t.	Maturation of graffian follicle

(A) A-t B-s C-p D-q
(B) A-s B-t C-q D-p
(C) A-s B-r C-q D-t
(D) A-t B-p C-q D-s

Q6 **Assertion (A):** Ovulation occurs around the 14th day of the menstrual cycle.
Reason (R): A surge in luteinizing hormone (LH) triggers ovulation.
(A) Both A and R are true, and R is the correct explanation of A
(B) Both A and R are true, but R is not the correct explanation of A
(C) A is true, but R is false
(D) A is false, but R is true

Q7 A female with 32 day menstrual cycle should expect ovulation on
(A) 14 (B) 18
(C) 16 (D) 20

Q8 Which of the following is not true regarding the uterus?
(A) It is site of implantation of a fertilized ovum
(B) It is site of menstruation
(C) It is site of ovulation
(D) It is site of development of foetus

Q9 Which hormone is primarily responsible for preparing the uterus for implantation?
(A) LH (B) Estrogen
(C) Progesterone (D) FSH

Q10 Read the given statements and select the correct option.
Statement 1 : Cyclic menstruation is an indicator of normal reproductive phase.
Statement 2 : It extends between menarche and menopause.

(A) Both statements 1 and 2 are correct.
(B) Statement 1 is correct but statement 2 is incorrect.
(C) Statement 1 is incorrect but statement 2 is correct.
(D) Both statements 1 and 2 are incorrect.

Answer Key

Q1	D
Q2	B
Q3	C
Q4	B
Q5	A
Q6	A
Q7	B
Q8	C
Q9	C
Q10	A

Hints & Solutions

Note: scan the QR code to watch video solution

Q1 **Text Solution:**

The menstrual phase is the first phase of the menstrual cycle and:Lasts for about 3 to 5 days.

Video Solution:

Q2 **Text Solution:**

The peak of estrogen secretion occurs just before ovulation, during the late follicular phase.In a typical 28-day menstrual cycle:It peaks around day 13.

Video Solution:

Q3 **Text Solution:**

Menopause refers to the natural cessation of the menstrual cycle and reproductive ability in women.

Video Solution:

Q4 **Text Solution:**

The menstrual cycle is a reproductive cycle seen in primates.It does not occur in all mammals.

Video Solution:

Q5 **Text Solution:**

A-t B-s C-p D-q

Video Solution:

Q6 **Text Solution:**

Ovulation usually occurs around day 14 in a typical 28-day menstrual cycle.Since the LH surge directly causes ovulation, the reason correctly explains the assertion.

Video Solution:

Q7 **Text Solution:**

Ovulation typically occurs 14 days before the start of the next menstrual cycle, regardless of the total cycle length.For a 32-day cycle:
$32-14=18$
So, ovulation is expected on day 18 of the cycle.

Video Solution:

Q8 **Text Solution:**

It is site of ovulation

Video Solution:

Q9 **Text Solution:**

Progesterone is the primary hormone responsible for thickening and vascularizing the endometrium

Video Solution:

Q10 **Text Solution:**

Both statements are true — Cyclic menstruation indicates a normal reproductive phase, and it occurs between menarche and menopause.
