Biology (Zoology)

DPP: 6

Human Reproduction

Q1 In women second polar body is formed after
(A) Ovulation
(B) Sperm entry into the primary oocyte
(C) Sperm entry into the secondary oocyte
(D) All of these

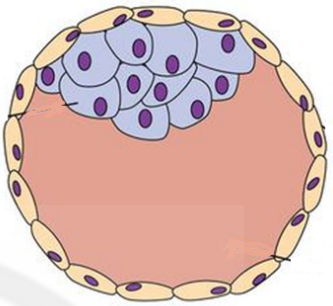

Q2 What is liberated at ovulation?
(A) Primary oocyte arrested at meiosis-I
(B) Primary oocyte arrested at meiosis-II
(C) Secondary oocyte arrested at meiosis –I
(D) Secondary oocyte arrested at Meiosis-II

Q3 Fertilization most commonly occurs if sperm and ovum transported simultaneously to
(A) Fimbriae infundibulum junction
(B) Ampulla
(C) Isthmus-Fundus junction
(D) None of these

Q4 Which of the following about human sperm is correct?
(A) Acrosome serves no particular function
(B) Acrosome has a enzymes used for piercing and penetrating the egg resulting in fertilization
(C) Acrosome serves as a sensory structure leading the sperm towards ovum.
(D) All of these

Q5 Capacitation refers to changes in the
(A) Ovum after fertilization
(B) Sperm after fertilization
(C) Sperm before fertilization
(D) Ovum before fertilization

Q6 Identify the stage shown in the given image ?

(A) Morula
(B) Gastrula
(C) Blastocyst
(D) None of the above

Q7 **Statement-1**: Implantation occurs after 7 days of fertilization.
Statement-2: Progesterone helps in implantation.
(A) Both the statements are true
(B) Statement-1 is true and statement-2 is false
(C) Statement-1 is false and statement -2 is true.
(D) Both the statements are false

Q8 When do Zona pellucida disappear?
(A) After implantation
(B) When blastocyst is formed
(C) Before it reaches Uterus
(D) None of these

Q9 **Assertion (A):** Implantation usually occurs in the ampullary-isthmic junction of the fallopian tube.
Reason (R): The ampullary-isthmic junction is vascular.
(A) Both A and R are true, and R is the correct explanation of A.

(B) Both A and R are true, but R is not the correct explanation of A.
(C) A is true, R is false.
(D) A is false, R is true.

Q10 After implantation ___(i)___ cells secrete HCG which maintains ___(ii)____ from disappearing and helps it to secrete ___(iii)____.

(A) (i) Inner cell mass (ii) Corpus luteum (iii) estrogen
(B) (i) Inner cell mass (ii) Graffian follicle (iii) Progesterone
(C) (i) Trophoblast cells (ii) Corpus luteum (iii) Progesterone
(D) (i) Trophoblast cells (ii) Corpus luteum (iii) Estrogen

Answer Key

Q1	C
Q2	D
Q3	B
Q4	B
Q5	C
Q6	C
Q7	A
Q8	B
Q9	D
Q10	C

Hints & Solutions

Note: scan the QR code to watch video solution

Q1 Text Solution:

Second polar body formation occurs after the sperm enters the secondary oocyte. When the sperm fuses with the secondary oocyte during fertilization, the secondary oocyte completes its second meiotic division, which results in the formation of a second polar body and the zygote .

Video Solution:

Q2 Text Solution:

At ovulation, the secondary oocyte is released from the ovary. This oocyte is arrested at metaphase II of meiosis II. It will remain arrested in this stage until fertilization occurs.

Video Solution:

Q3 Text Solution:

Fertilization in humans most commonly occurs in the ampulla.

Video Solution:

Q4 Text Solution:

The acrosome contains enzymes like hyaluronidase and acrosin that help the sperm penetrate the egg's protective layers (such as the zona pellucida), facilitating fertilization.

Video Solution:

Q5 Text Solution:

Capacitation refers to the physiological changes that occur in sperm after they enter the female reproductive tract but before they are able to fertilize the ovum.

Video Solution:

Q6 Text Solution:

The image shows Blastocyst stage.

Video Solution:

Q7 Text Solution:

Both statements are scientifically accurate and interlinked in the process of early pregnancy.

Video Solution:

Q8 **Text Solution:**

Just before implantation, the blastocyst "hatches" out of the zona pellucida.

Video Solution:

Q9 **Text Solution:**

Implantation does not occur in the fallopian tube under normal conditions.Normal implantation occurs in the endometrium of the uterus, specifically in the posterior wall of the upper part (fundus).

Video Solution:

Q10 **Text Solution:**

(i) Trophoblast cells (ii) Corpus luteum (iii) Progesterone
