PARISHRAM 2.0 2026 (Class 12th)

Biology (Zoology)

DPP: 01

Human Reproduction

Q1 Sperms are produced in :
(A) Seminiferous tubules
(B) Vas deferens
(C) Prostate gland
(D) Interstitial cells

Q2 What is the role of epididymis?
(A) Produce seminal fluid
(B) Sperm maturation and storage
(C) Transport egg
(D) Store urine

Q3 Seminal plasma contains all the components, except :
(A) Glucose (B) Fructose
(C) Calcium (D) Enzymes

Q4 What would likely happen if the scrotum failed to regulate temperature properly?
(A) Increased sperm production
(B) Increased libido
(C) Increase in testosterone levels
(D) Temporary sterility

Q5 Which cells in the testes are responsible for producing testosterone?
(A) Spermatogonia (B) Leydig cells
(C) Sertoli cells (D) Spermatids

Q6 Which of the following is the correct pathway for sperm ejaculation?
(A) Testes Urethra Vas deferens Penis
(B) Epididymis Penis Vas deferens Urethra
(C) Testes Epididymis Vas deferens Urethra
(D) Penis Vas deferens Urethra Testes

Q7 How many of the following are male accessory glands?
(a)Seminal vesicles (b) Bulbourethral gland
(c)Prostate gland (d) Bartholin's gland
(A) One (B) Three
(C) Four (D) Two

Q8 Statement -1 : The penis is the male external genitalia
Statement -2 : The enlarged end of penis is called glans penis
(A) Both the statements are false
(B) Statement-1 is true and statement-2 is false
(C) Both the statements are true
(D) Statement -1 is false and statement-2 is true

Q9 Which of the following cells are present in the interstitial spaces?
(A) Male germ cells
(B) Sertoli cells
(C) Leydig cells
(D) Both (a) and (b)

Q10 Each testis has about __(i)___ compartments called testicular lobules. Each lobule contain ___(ii)__ highly coiled seminiferous tubules.
(A) (i) 300 (ii) 4
(B) (i) 250 (ii) one to three
(C) (i) 200 (ii) 2
(D) (i) 350 (ii) 4

Answer Key

Q1	A
Q2	B
Q3	A
Q4	D
Q5	B
Q6	C
Q7	B
Q8	C
Q9	C
Q10	B

Hints & Solutions

Note: scan the QR code to watch video solution

Q1 **Text Solution:**
Sperms are produced in the seminiferous tubules, which are highly coiled structures found inside the testes.

Video Solution:

Q2 **Text Solution:**
The epididymis is essential for sperm maturation and temporary storage before ejaculation.

Video Solution:

Q3 **Text Solution:**
Seminal plasma contains fructose, calcium, and enzymes, but not glucose as a major component.

Video Solution:

Q4 **Text Solution:**
The scrotum plays a vital role in regulating the temperature of the testes, maintaining it at about 2–3°C below body temperature, which is essential for spermatogenesis (sperm production).If Temperature Regulation Fails This can lead to temporary sterility.

Video Solution:

Q5 **Text Solution:**
Leydig cells (also called interstitial cells) are located between the seminiferous tubules in the testes and are responsible for producing the male sex hormone testosterone.

Video Solution:

Q6 **Text Solution:**
Testes Epididymis Vas deferens Urethra

Video Solution:

Q7 **Text Solution:**
(a)Seminal vesicles (b) Bulbourethral gland (c)Prostate gland are male accessory glands. Bartholin's is present in females.

Video Solution:

Q8 Text Solution:

Both statements are factually correct and anatomically accurate.

Video Solution:

Q9 Text Solution:

Leydig cells, also known as interstitial cells, are located in the interstitial spaces between the seminiferous tubules in the testes.

Video Solution:

Q10 Text Solution:

(i) 250 (ii) one to three
