Corporate Office : AESL, 3rd Floor, Incuspaze Campus-2, Plot No. 13, Sector-18, Udyog Vihar, Gurugram, Haryana - 122015, *Ph.*+91-1244168300

MM : 720

Fortnightly Test for NEET-2027 (XII Passed) Ph-2 - FT04B

Time : 180 Min.

Topics Covered:
Physics : Gravitation, Mechanical Properties of Solids, Mechanical Properties of Fluids
Chemistry : Thermodynamics
Botany : Morphology of Flowering Plants
Zoology : Excretory Products & their Elimination, Locomotion & Movement-I: (Upto properties of muscle contraction)

General Instructions :
Duration of Test is 3 hrs.
The Test consists of 180 questions. The maximum marks are 720.
There are four parts in the question paper consisting of Physics, Chemistry, Botany and Zoology having 45 questions in each part of equal weightage.
Each question carries +4 marks. For every wrong response, –1 mark shall be deducted from the total score. Unanswered/unattempted questions will be given no marks.
Use blue/black ballpoint pen only to darken the appropriate circle.
Mark should be dark and completely fill the circle.
Dark only one circle for each entry.
Dark the circle in the space provided only.
Rough work must not be done on the Answer sheet and do not use white fluid or any other rubbing material on the Answer sheet.

CC-483 CC-483

PHYSICS

DreamNEET

1. In a solar system, the time-period of revolution of a planet tracing a circular orbit of radius R is proportional to:
(1) $R^{3/2}$ (2) R^2
(3) R^3 (4) $R^{1/2}$

2. Kepler's law regarding constancy of areal velocity of a planet is the consequence of the law of conservation of
(1) Energy (2) Angular momentum
(3) Liner velocity (4) Linear momentum

3. A planet revolving around the sun sweeps area A_1 in 2 days, A_2 in 4 days and A_3 in 8 days. The ratio $A_1 : A_2 : A_3$ is
(1) 1 : 2 : 4 (2) 1 : 4 : 8
(3) 2 : 5 : 6 (4) 4 : 8 : 1

4. If density of a planet is double that of the earth and the radius 1.5 times that of the earth, the acceleration due to gravity on the surface of the planet is
(1) $\frac{3}{4}$ times that on the surface of the earth
(2) 3 times that on the surface of the earth
(3) $\frac{4}{3}$ times that on the surface of the earth
(4) 6 times that on the surface of the earth

5. **Statement I:** Weight experienced by astronaut in a spaceship while orbiting the earth is zero.
Statement II: Kinetic energy of a satellite is positive.
In the light of the above statements, choose the most appropriate answer from the options given below:
(1) Both statement I and statement II are correct
(2) Statement I is correct but statement II is incorrect
(3) Statement I is incorrect but statement II is correct
(4) Both statement I and statement II are incorrect

6. A body weighs 300 N on the surface of the earth. How much will it weigh at a distance one third of radius of earth from centre of earth?
(1) 100 N (2) 200 N
(3) 300 N (4) 250 N

7. Read the following assertion (A) and reason (R) and select the **correct** option.
Assertion (A) : Work done by gravitational force in moving a body from one point to another is path dependent.
Reason (R) : Gravitational force is a non-conservative force.
(1) Only (A) is true and (R) is false
(2) Both (A) and (R) are false
(3) Both (A) and (R) are true and (R) is the correct explanation of (A)
(4) Both (A) and (R) are true but (R) is not the correct explanation of (A)

8. Two planets A and B have same density. The radius of A is twice that of B. The ratio of escape speeds from planet A to the planet B $V_A : V_B$ is
(1) 2 : 1 (2) $\sqrt{2}$: 1
(3) 1 : $\sqrt{2}$ (4) 1 : 2

CC-483 CC-483

9. The factors on which the escape speed from earth depend, is/are
(1) The height of projection from the earth's surface
(2) Mass of object
(3) Mass of earth
(4) Both (1) and (3)

10. If kinetic energy K and potential energy U is possessed by an orbiting satellite, then
(1) $K < 0$ (2) $U < 0$
(3) $K = 0$ (4) $U = 0$

11. The minimum work done to raise a mass m from the surface of the earth to a height $4R$ is (Where R is radius of earth and g is acceleration due to gravity on surface of earth)

(1) $\frac{3}{4}mgR$ (2) $-\frac{3}{4}mgR$

(3) $\frac{4}{5}mgR$ (4) $-\frac{4}{5}mgR$

12. A body weighs 40 N at the north pole of earth. Its weight at the equator will be (account the variation due to the earth's rotation only)

(1) Less than 40 N (2) More than 40 N

(3) Equal to 40 N (4) None of these

13. The gravitational potential in a region is given by $V = -(x^2 + y^2 + z^2)$ J/kg, where x, y and z are in m. The gravitational field intensity at point (1, 1, 0) m is

(1) $\left(-2\hat{i}+2\hat{j}\right)$ N/kg (2) $\left(2\hat{i}-2\hat{j}\right)$ N/kg

(3) $\left(2\hat{i}+2\hat{j}\right)$ N/kg (4) $\left(2\hat{i}+2\hat{j}+2\hat{k}\right)$ N/kg

14. Gravitational potential of a uniform spherical shell of mass M and radius R on the surface is V. The potential at a distance $\frac{R}{2}$ from the centre of shell is

(1) $\frac{V}{2}$ (2) $\frac{V}{4}$

(3) V (4) $2V$

15. The weight of a person is W at the surface of earth. At what height from surface of earth the weight reduces by 36%? (R is radius of earth)

(1) R (2) $\frac{R}{2}$

(3) $\frac{R}{4}$ (4) $\frac{R}{3}$

16. Breaking stress of a wire does not depends on

(1) Type of material

(2) Area of cross-section of wire

(3) Length of wire

(4) Both (2) & (3)

17. The bulk modulus of a spherical object is 'B'. If it is subjected to uniform pressure 'p', the fractional decrease in radius is

(1) $\frac{p}{B}$ (2) $\frac{B}{3p}$

(3) $\frac{3p}{B}$ (4) $\frac{p}{3B}$

18. Two wires of same metal having the length in the ratio 3:1 and their radii ratio as 1:3 are stretched by the same force. The respective ratio of longitudinal strain in the two wires will be

(1) 1 : 9 (2) 9 : 1

(3) 1 : 3 (4) 3 : 1

19. For a material, if the plastic region of its stress-strain curve is large then the material will be

(1) Brittle (2) Ductile

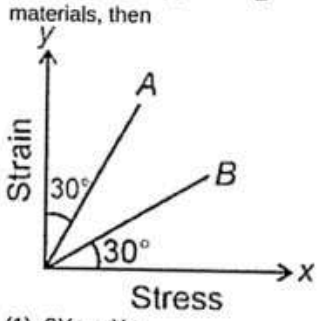

(3) Elastomers (4) Both (1) and (3)

20. A wire can support a maximum load of W. If the wire is cut into 4 equal parts and joined in parallel, then the maximum load this system can now support will be

(1) W (2) $\frac{W}{4}$

(3) $4W$ (4) $2W$

21. The strain-stress graph for wires A and B are as shown in the figure. If Y_A and Y_B are the Young's moduli of the materials, then

(1) $2Y_A = Y_B$ (2) $Y_A = Y_B$

(3) $Y_A = 3Y_B$ (4) $3Y_A = Y_B$

22. The energy stored per unit volume of a stretched wire will be

(1) $\frac{1}{2} \times Y \times$ Strain (2) $Y \times (\text{Strain})^2$

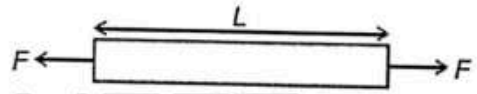

(3) $\frac{1}{2} \times Y \times (\text{Strain})^2$ (4) $\frac{1}{2} \times Y^2 \times$ Strain

23. Factors affecting modulus of elasticity of any material is/are

(1) Temperature (2) Nature of material

(3) Impurity (4) All of the above

24. A uniform cylindrical rod of length L, cross-sectional area A and Young's modulus Y is acted upon by two forces as shown in the figure. The elongation of the rod is

(1) $\frac{2FL}{YA}$ (2) $\frac{FL}{YA}$

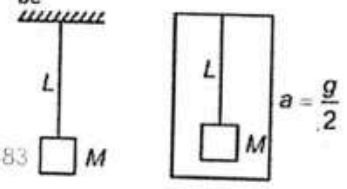

(3) $\frac{FL}{2YA}$ (4) Zero

25. The breaking stress of aluminium is 7.5×10^8 dyne/cm^2. The maximum length of aluminium wire that can hang vertically without getting broken is (Take density of aluminium to be 2.7 g/cm^3)

(1) 2.834×10^5 cm (2) 7.824×10^5 cm

(3) 2.134×10^3 cm (4) 5.5×10^5 cm

26. When a mass M is suspended from rigid support with the help of wire of length L, it increases its length by l. If the same arrangement is suspended in an elevator accelerating upwards with an acceleration $\frac{g}{2}$, then increase in length will be

(1) (2)

(1) l (2) $\frac{3l}{2}$

(3) $2l$ (4) $\frac{2l}{3}$

27. The bulk modulus of rubber is 9×10^8 N/m^2. To what depth a rubber ball should be taken in a lake so that its volume is decreased by 0.1%? ($g = 10$ m/s^2)

(1) 20 m (2) 90 m

(3) 45 m (4) 60 m

DreamNEET

28. The maximum elongation of a steel wire having 2 m length is 0.2 cm. If its Young's modulus is 2×10^{11} N m^{-2}, then its elastic limit is

(1) 8×10^8 Pa (2) 4×10^8 Pa
(3) 1×10^8 Pa (4) 2×10^8 Pa

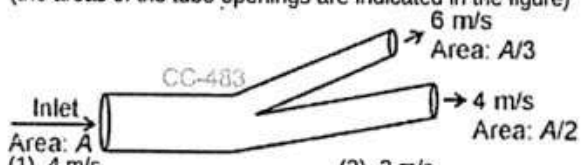

29. A cube of side 5 cm has its upper face displaced by 0.1 mm w.r.t. lower face by a tangential force of 10 kN. Shear modulus of the cube is

(1) 2×10^7 N/m^2 (2) 2×10^8 N/m^2
(3) 2×10^9 N/m^2 (4) 4×10^9 N/m^2

30. A piston of cross section area 10^{-2} m^2 is used in a hydraulic press to exert a force of 200 N on the water. The cross sectional area of the other piston which supports an object having mass 12×10^4 gram is (Take $g = 10$ m/s^2)

(1) 6×10^{-2} m^2 (2) 1×10^{-2} m^2
(3) 3×10^{-2} m^2 (4) 4×10^{-2} m^2

31. An incompressible fluid flows through horizontal tube as shown in the figure. The velocity of fluid at the inlet will be (the areas of the tube openings are indicated in the figure)

(1) 4 m/s (2) 3 m/s
(3) 5 m/s (4) 6 m/s

32. Relative density of a body in water is 0.75. The density of the body is

(1) 1000 kg/m^3 (2) 750 kg/m^3
(3) 500 kg/m^3 (4) 250 kg/m^3

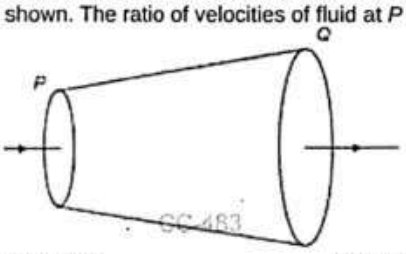

33. Increase in pressure on a swimmer 10 m below the surface of a lake is nearly

(1) 2 atm (2) 1 atm
(3) 3 atm (4) 4 atm

34. A block weighs 100 N in air and 80 N when immersed in a liquid. The upthrust (in N) is

(1) 80 N (2) 100 N
(3) 20 N (4) 180 N

35. An ideal fluid flows through a pipe of circular cross-section with diameter 10 cm and 25 cm at P and Q respectively as shown. The ratio of velocities of fluid at P to Q is

(1) 25 : 1 (2) 25 : 2
(3) 25 : 4 (4) 25 : 6

36. The ratio of shear stress to the strain rate in fluid is called

(1) Surface tension (2) Energy density
(3) Velocity head (4) Coefficient of viscosity

37. Match column A with column B and choose the correct option. (Symbol have their usual meaning)

Column A	Column B
A. Excess pressure inside a soap bubble	(P) $\frac{2r^2(\sigma-\rho)g}{9\eta}$
B. Volume flow rate of an ideal fluid	(Q) $\frac{4T}{r}$
C. Buoyant force on an immersed body	(R) Av
D. Terminal velocity of a small sphere in a viscous fluid (v_t)	(S) $\rho g V_{dis}$

(1) A(P), B(Q), C(R), D(S) (2) A(Q), B(R), C(S), D(P)
(3) A(R), B(P), C(Q), D(S) (4) A(S), B(P), C(Q), D(R)

38. Consider the given statements and choose the correct option.

Statement A: The submerged volume inside a liquid of a floating body does not depend upon variation in g though both thrust and weight depends upon g.

Statement B: The weight of a plastic bag full of air is same as that of empty plastic bag in air.

Statement C: Relative density is the ratio of volume of water and weight of water.

(1) Both statements A and B are correct
(2) Both statements A and B are incorrect
(3) Only statement C is correct
(4) All statements are correct

39. Two adjacent layers of a fluid move with a relative velocity of 18 cm s^{-1}. If the separation between the layers is 0.1 cm, the velocity gradient between them is

(1) 1.8 s^{-1} (2) 18 s^{-1}
(3) 1800 s^{-1} (4) 180 s^{-1}

40. A 20 cm long capillary tube is dipped in water. The water rises up to 8 cm in it. If the entire arrangement is put into lift which is accelerating downward with acceleration g, then length of water column in capillary is

(1) 16 cm (2) 4 cm
(3) 20 cm (4) 10 cm

41. The rise of liquid in a capillary tube is primarily due to

(1) Viscosity (2) Surface tension
(3) Atmospheric pressure (4) Density of liquid

42. A liquid does not wet the solid surface if angle of contact is

(1) 45° (2) 60°
(3) 75° (4) 120°

43. In a streamline flow,

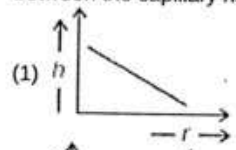

a. The speed of particle always remains same
b. The velocity of the particle always remains same.
c. The kinetic energies of all the particles of same mass arriving at a given point are same.
d. The momentum of all the particles of same mass arriving at the given point are same.

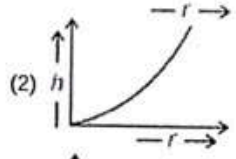

Choose the correct answer from the options given below:

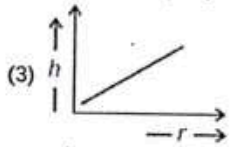

(1) Only a and b are correct (2) Only b and d are correct
(3) Only c and d are correct (4) a, b, c and d are correct

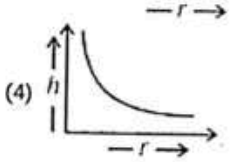

CC-483 DreamNEET

44. Which of the following graphs may represent the relation between the capillary rise h and radius of capillary r?

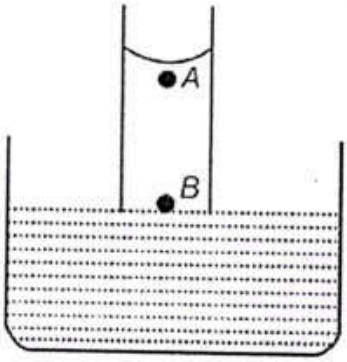

(1) 

(2) 

(3) 

(4) 

45. A capillary tube is dipped in water as shown. If P is the atmospheric pressure, P_A the pressure at A and P_B the pressure at B, then choose the correct option.

(1) $P_A = P_B = P$
(2) $P_A > P_B > P$
(3) $P > P_A, P = P_B$
(4) $P_A = P, P > P_B$

CHEMISTRY

46. Which one of the following properties of a system is intensive?
(1) Surface tension
(2) Gibbs free energy
(3) Volume
(4) Mass

47. Which among the following is a path function?
(1) U
(2) U+PV
(3) H – TS
(4) W

48. Bomb calorimeter is used to calculate
(1) ΔS
(2) W
(3) ΔG
(4) ΔU

49. Bond dissociation enthalpy of N ≡ N, H – H and N – H bonds are x, y and z respectively. Enthalpy change in formation of 2 moles of NH_3 is
(1) x + y – 2z
(2) 2z – x – 3y
(3) z – x – y
(4) x + 3y – 6z

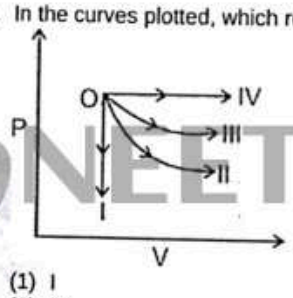

50. Under what conditions, a reaction is spontaneous at all temperatures?
(1) $\Delta H > 0, \Delta S > 0$
(2) $\Delta H < 0, \Delta S < 0$
(3) $\Delta H > 0, \Delta S < 0$
(4) $\Delta H < 0, \Delta S > 0$

51. For which of the following, enthalpy of formation is zero?
(1) $O_3(g)$
(2) $Br_2(g)$
(3) C(graphite)
(4) C(diamond)

52. If $\Delta_f H°(H_2O)$ is –280 kJ mol^{-1}, then how much heat energy will be released by the combustion of 4 g of H_2 gas?
(1) 70 kJ
(2) 140 kJ
(3) 280 kJ
(4) 560 kJ

53. Consider the given reaction.
$A(g) + 3B(s) \rightarrow 4C(g)$
The difference between the heat of reaction at constant pressure and constant volume at 300 K for above reaction is
(1) 300 R
(2) 1200 R
(3) 900 R
(4) 600 R

54. In the curves plotted, which represents isobaric process?

(1) I
(2) III
(3) IV
(4) II

55. For the following reaction
$2C_2H_6(g) + 7O_2(g) \rightarrow 4CO_2(g) + 6H_2O(g)$
The sign of ΔH, ΔS and ΔG respectively would be
(1) –, –, +
(2) –, +, –
(3) –, +, +
(4) +, –, +

56. At what temperature, the reaction A + B → 2C will be at equilibrium [Given: $\Delta H = -60$ kJ mol^{-1} and $\Delta S = -200$ JK^{-1} mol^{-1}]
(1) 27°C
(2) 37°C
(3) 43°C
(4) 93°C

57. If 20 J of heat is given to the system at constant pressure and 30 J of work is done on the system, then the change in internal energy is
(1) – 50 J
(2) + 50 J
(3) – 10 J
(4) 10 J

58. If the enthalpy of hydrogenation of cyclohexene is – x $kJmol^{-1}$ and resonance energy of benzene is – y $kJmol^{-1}$ then enthalpy of hydrogenation of benzene in $kJmol^{-1}$ will be
(1) (– x – y)
(2) (– 3x – y)
(3) (– 3x + y)
(4) (x + y)

CC-483 DreamNEET

59. If 200 ml of 0.1 M H_2SO_4 solution is mixed with 200 ml of 0.15 M NaOH solution then heat evolved during the neutralization process is (Heat of neutralisation of strong acid and strong base = –13.7 kcal/mol)
(1) 411 cal (2) 548 cal
(3) 274 cal (4) 822 cal

60. Calculate ΔU^0 for the reaction,
$CaC_2(s) + 2H_2O(l) \rightarrow Ca(OH)_2(s) + C_2H_2(g)$
if $\Delta H^\circ_{f(CaC_2)} = -62.0\ kJ/mol$
$\Delta H^\circ_{f(H_2O)} = -286.0\ kJ/mol$
$\Delta H^\circ_{f[Ca(OH)_2]} = -986.0\ kJ/mol$
$\Delta H^\circ_{f(C_2H_2)} = +227.0\ kJ/mol$
(1) +122.52 kJ/mol (2) –122.52 kJ/mol
(3) +127.48 kJ/mol (4) –127.48 kJ/mol

61. The correct option for free expansion of an ideal gas under adiabatic condition is
(1) q = 0, ΔT < 0 and w > 0 (2) q < 0, ΔT = 0 and w = 0
(3) q > 0, ΔT > 0 and w > 0 (4) q = 0, ΔT = 0 and w = 0

62. The bond dissociation energies of X_2, Y_2 and XY are in the ratio of 1 : 0.5 : 1. ΔH for the formation of XY is –200 kJ mol^{-1}. The bond dissociation energy of X_2 will be
(1) 200 kJ mol^{-1} (2) 100 kJ mol^{-1}
(3) 400 kJ mol^{-1} (4) 800 kJ mol^{-1}

63. If for a reaction A(s) $\rightarrow$2B(g), ΔU = 1.2 kcal and ΔS = 40 cal K^{-1} at 400 K then ΔG for the reaction will be (R = 2 cal mol^{-1} K^{-1})
(1) –10 kcal (2) –12.2 kcal
(3) –11.2 kcal (4) –13.2 kcal

64. Two moles of an ideal gas undergo reversible isothermal expansion from 2.303 L to 23.03 L at 27°C. The change in entropy is (R = 8.314 J $mol^{-1}K^{-1}$)
(1) 38.3 J K^{-1} (2) 16.6 J K^{-1}
(3) 4.6 J K^{-1} (4) –4.6 J K^{-1}

65. In which of the following processes entropy increases?
(1) Thermal decomposition of ammonia
(2) Condensation of water vapours
(3) Polymerisation of ethene to polythene
(4) Temperature of a crystalline solid lowered from 130 K to 0 K.

66. If Δ_fH° and Δ_fS° for the reaction A(g) + B(g) $\rightleftharpoons$ C(g) + D(g) are –29.8 kcal and –100 cal K^{-1} then $K_{equilibrium}$ for the reaction will be
(1) 0 (2) 1
(3) 10 (4) $\frac{1}{10}$

67. For the reaction,
$N_2H_2(g) + H_2(g) \rightarrow N_2H_4(g)$, $\Delta_rH^\circ = -109$ kJ/mol
The bond energy of (N – N) bond will be
Given : BE of (N = N) = 400 kJ/mol
BE of (H – H) = 436 kJ/mol
BE of (N – H) = 391 kJ/mol
(1) 163 kJ/mol (2) 206 kJ/mol
(3) 90 kJ/mol (4) 360 kJ/mol

68. Consider the following reactions

Reaction	ΔH(kJ)
$A \rightarrow B$	+300
$2B \rightarrow 3C + D$	–200
$E + C \rightarrow 4D$	+700

ΔH (in kJ) for the reaction 2A + 3E $\rightarrow$ 13D, will be
(1) –2000 (2) +1200
(3) +2500 (4) –2800

69. One mole of an ideal gas is allowed to expand reversibly and adiabatically from a temperature of 27°C. If the work done by the gas in the process is 3 kJ, then the final temperature will be equal to (C_V = 20 J/K mol)
(1) 100 K (2) 450 K
(3) 150 K (4) 400 K

70. Consider the following two statements.
Statement I: For the same initial P, V and T, final temperature is more in adiabatic reversible expansion as compared to adiabatic irreversible expansion considering final volume as same.
Statement II: Change in internal energy is zero for the expansion of an ideal gas against vacuum in adiabatic process.
In the light of above two statements, choose the correct option.
(1) Both statement I and statement II are correct
(2) Both statement I and statement II are incorrect
(3) Statement I is incorrect but statement II is correct
(4) Statement I is correct but statement II is incorrect

71. If Δ_fH°(NaCl(s)), $\Delta_{sub}H^\circ$(Na(s)), $\Delta_{bond}H^\circ(Cl_2(g))$, Δ_iH°(Na) and $\Delta_{eg}H^\circ$(Cl(g)) are –411.2, 108.4, 242, 496 and –348.6 kJ mol^{-1} then $\Delta_{lattice}H^\circ$(NaCl(s)) will be
(1) 788 kJ mol^{-1} (2) 540 kJ mol^{-1}
(3) 684 kJ mol^{-1} (4) 820 kJ mol^{-1}

72. In an isothermal process for an ideal gas
(1) q = 0 and ΔU = 0 (2) q ≠ 0 and ΔU = 0
(3) q = 0 and ΔU ≠ 0 (4) q ≠ 0 and ΔU ≠ 0

73. Match List-I with List-II

List-I	List-II
(a) $CaCO_3(s) \rightarrow CaO(s) + CO_2(g)$	(i) ΔH = ΔU
(b) $2HI(g) \rightarrow H_2(g) + I_2(g)$	(ii) ΔH = ΔU – RT
(c) $PCl_3(g) + Cl_2(g) \rightarrow PCl_5(g)$	(iii) ΔH = ΔU + RT
(d) $N_2(g) + 3H_2(g) \rightarrow 2NH_3(g)$	(iv) ΔH = ΔU – 2RT

The correct match is
(1) (a)(iii), (b)(i), (c)(ii), (d)(iv) (2) (a)(i), (b)(iii), (c)(iv), (d)(ii)
(3) (a)(iv), (b)(i), (c)(ii), (d)(iii) (4) (a)(ii), (b)(i), (c)(iii), (d)(iv)

74. Under isothermal conditions, a gas expands at 27° C from 2.5 L to 5 L against a constant external pressure of 5 bar. The work done by the gas is
(Given: 1 L bar = 100 J)
(1) –2800 J (2) –1250 J
(3) –2500 J (4) –3750 J

75. Given below are two statements : one is labelled as **Assertion (A)** and the other is labelled as **Reason (R).**
Assertion (A): Heat of neutralisation reaction of aq HF with NaOH is more than 13.7 kcal eq^{-1}.
Reason (R): HF is very strong acid.
In the light of the above statements, choose the **most appropriate** answer from the options given below.
(1) Both Assertion & Reason are true and the reason is the correct explanation of the assertion
(2) Both Assertion & Reason are true but the reason is not the correct explanation of the assertion
(3) Assertion is true statement but Reason is false
(4) Both Assertion and Reason are false statements

76. 2.24 L of an ideal gas at STP requires 6 calories to rise its temperature by 25°C at constant volume. The value of C_P of the gas is
(1) 4.4 cal (2) 2.2 cal
(3) 8.2 cal (4) 2.4 cal

77. If an ideal gas expands isothermally in vacuum then select the correct relation.
(i) w = 0
(ii) $\Delta U = 0$
(iii) Q = 0
Choose the correct option.
(1) (i) and (ii) only (2) (ii) only
(3) (ii) and (iii) only (4) (i), (ii) and (iii)

78. Entropy change (in J/K) for the vaporization of 9 g water at 373 K and 1 atm is (Given : enthalpy of vaporisation of water is 40.66 kJ/mol)
(1) 54.5 (2) 27.25
(3) 109.2 (4) 36.33

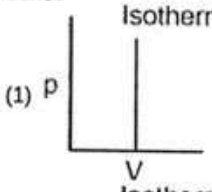

79. The amount of heat required to raise the temperature of 10 g of iron from 30°C to 100°C is (The specific heat of iron is 0.45 $Jg^{-1}K^{-1}$)
(1) 290 J (2) 200 J
(3) 315 J (4) 410 J

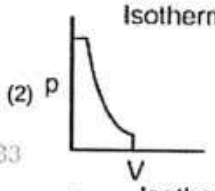

80. Consider the following statements.
Statement I: Temperature is the measure of average chaotic motion of particles in the system.
Statement II: The crystalline solid state is the state of highest entropy.
In the light of above statements choose the **correct** option.
(1) Both statement I and statement II are correct
(2) Statement I is correct but statement II is incorrect
(3) Statement I is incorrect but statement II is correct
(4) Both statement I and statement II are incorrect

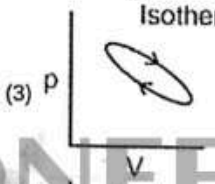

81. Enthalpy of neutralisation of four acids A, B, C and D with NaOH are –10.5, –13.7, – 5.9 and –12.7 kcal eq^{-1} respectively. Out of A, B, C and D strongest acid is
(1) C (2) A
(3) D (4) B

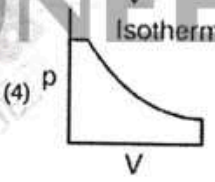

82. For monoatomic ideal gas the value of the ratio of C_P and C_V is
(1) $\frac{5}{3}$ (2) $\frac{5}{2}$
(3) $\frac{4}{3}$ (4) $\frac{7}{5}$

83. **Statement-I:** In methane, all the four C-H bonds are identical in bond length and energy.
Statement-II: The energies required to break the individual C-H bonds in each successive steps are same.
In the light of above statement choose the correct option among the following.
(1) Both statements I and statement II are correct
(2) Both statements I and statement II are incorrect
(3) Statement I is correct and statement II is incorrect
(4) Statement I is incorrect and statement II is correct

84. Which of the following p-V curve represents maximum work done?
(1) 

(2) 

(3) 

(4) 

85. Mean bond enthalpy of C–H bond is 416 kJ mol^{-1}. $\Delta_a H^\circ$ for CH_4 is
(1) 416 kJ mol^{-1} (2) –416 kJ mol^{-1}
(3) 1664 kJ mol^{-1} (4) –1664 kJ mol^{-1}

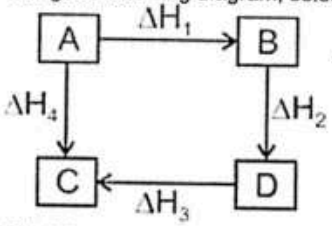

86. Given below are the two statements.
Statement I: For every chemical reaction at equilibrium, standard Gibbs energy change of the reaction is zero.
Statement II: ΔS_{total} for a spontaneous process is greater than zero.
In light of above statements, choose the correct answer.
(1) Statement I is correct but statement II is incorrect
(2) Both statement I and statement II are correct
(3) Both statement I and statement II are incorrect
(4) Statement I is incorrect but statement II is correct

87. Heat of fusion of a compound is 3000 J/mol at 27°C. Entropy change will be
(1) 12 JK^{-1} mol^{-1} (2) 10 JK^{-1} mol^{-1}
(3) 0.1 JK^{-1} mol^{-1} (4) 1.5 JK^{-1} mol^{-1}

CC-483 DreamNEET Aakash Medical IIT-JEE

88. Consider the following statements
(a) During reversible adiabatic expansion of an ideal gas, cooling takes place
(b) Work done during cyclic process is zero
(c) Change in entropy is negative during stretching of rubber.
Choose the **correct** statement(s).
(1) (b) only
(2) (a) & (c) only
(3) (a), (b) and (c)
(4) (c) only

89. Using the following diagram, select the correct relation

(1) $\Delta H_1 = \Delta H_2 + \Delta H_3 + \Delta H_4$
(2) $\Delta H_1 + \Delta H_3 = \Delta H_2 + \Delta H_4$
(3) $\Delta H_4 = \Delta H_1 + \Delta H_2 - \Delta H_3$
(4) $\Delta H_4 - \Delta H_3 = \Delta H_1 + \Delta H_2$

90. Total heat capacity for adiabatic process is
(1) Zero
(2) 1
(3) Infinite
(4) R

BOTANY

91. Read the following assertion and reason and choose the **correct** option.
Assertion : If a fruit is formed without fertilisation of the ovary, it is called as a parthenocarpic fruit.
Reason : The fruit consists of a wall called pericarp.
(1) Both Assertion & Reason are true and the reason is the correct explanation of the assertion
(2) Both Assertion & Reason are true but the reason is not the correct explanation of the assertion
(3) Assertion is true statement but Reason is false
(4) Both Assertion and Reason are false statements

92. Select the **correctly** matched pair.
(1) Makoi – Leaf base is swollen and is called pulvinus
(2) *Cassia* – Imbricate aestivation in corolla and actinomorphic flowers
(3) Marigold – Ovary has a single ovule attached to the placenta present at its base
(4) Rose – Apocarpous gynoecium with inferior ovary

93. Observe the following diagram carefully.

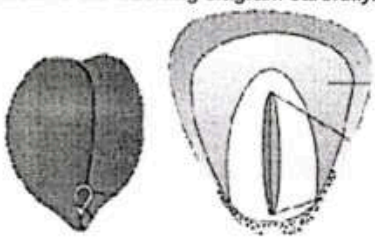

Fig.A Fig.B

Fig. A differs from Fig.B as in the latter
(a) Hilum through which developing seeds were attached to the fruit is found.
(b) Endosperm is small and situated in a groove at one end of the embryo.
(c) A large shield-shaped dicotyledon known as scutellum is found.
(d) Plumule and radicle are enclosed in sheaths which are called the coleoptile and coleorhiza, respectively.
The **correct** one(s) is/are
(1) (a) and (b) only
(2) (b), (c) and (d) only
(3) (c) and (d) only
(4) (d) only

94. Testa and tegmen of seeds are originated from
(1) Hilum
(2) Integuments of ovule
(3) Radicle
(4) Scutellum

95. The arrangement of flowers on the floral axis is called as
(1) Venation
(2) Phyllotaxy
(3) Inflorescence
(4) Pulvinus

96. In Neem, a number of leaflets are present on a common axis called
(1) Stipule
(2) Veinlet
(3) Rachis
(4) Lamina

97. Veins provide $\underline{A}$ to the leaf blade and act as channels of transport for $\underline{B}$.
Select the appropriate option for A and B respectively.
(1) Flexibility and water only
(2) Rigidity and water, minerals and food materials
(3) Rigidity and minerals only
(4) Flexibility and food materials only

98. Select the option that describes the **correct** position of floral parts over thalamus in *Gloriosa* plant.
(1) Gynoecium is present in the centre and other parts cover it partially
(2) Margin of thalamus grows upward which encloses the ovary completely and other parts arises below the ovary
(3) Gynoecium occupy the highest position while the other parts are situated below it
(4) Gynoecium is situated in the centre and other parts of the flower are located at the rim of the thalamus, at the same level

99. The ornamental plant of family Solanaceae is
(1) Tulip
(2) *Petunia*
(3) *Gloriosa*
(4) Lupin

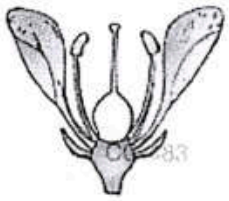

100. Read the following statements and choose the **correct** option.
Assertion(A) : Staminode is a sterile stamen.
Reason(R) : It resembles to a stamen which has no anther but produces pollen grains.
(1) Both Assertion & Reason are true and the reason is the correct explanation of the assertion
(2) Both Assertion & Reason are true but the reason is not the correct explanation of the assertion
(3) Assertion is true statement but Reason is false
(4) Both Assertion and Reason are false statements

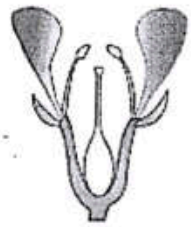

101. Select the **incorrect** match.
(1) Epiphyllous – Lily
(2) Epipetalous – Brinjal
(3) Diadelphous – Pea
(4) Polyadelphous – China rose
(1) (1) (2) (2)
(3) (3) (4) (4)

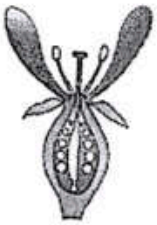

102. Choose **odd** one w.r.t. ploidy in maize seed
(1) Coleorhiza (2) Scutellum
(3) Aleurone layer (4) Coleoptile

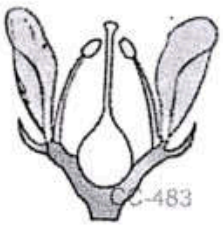

103. The stamens are attached to the perianth in the flowers of
(1) Lily (2) Brinjal
(3) Pea (4) Soyabean

104. Which of the following figures shows epigynous flower, as per the position of calyx, corolla and androecium with respect to the ovary on the thalamus, as seen in guava, cucumber etc.

(1) 

(2) 

(3) 

(4) 

105. The fruit type of coconut is
(1) Drupe (2) Berry
(3) Capsule (4) Legume

106. The outermost whorl of flower is characterised by which of the given features?
(a) Generally brightly coloured to attract insects for pollination.
(b) Has role in protection of flower in bud stage.
(c) Shows valvate type of aestivation in *Solanum*.
(d) Varies greatly in shape and composed of petals.
Choose the option for **correct** one(s).
(1) (a) and (c) only (2) (b) only
(3) (b) and (c) only (4) (a), (b) and (d) only

107. Reticulate venation is present in
(1) Peepal (2) Banana
(3) Wheat (4) Rice

108. Read the following statements (A-D).
(A) In *Dianthus* and *Primrose*, ovules are borne on central axis and septa are absent.
(B) Variation in the length of filaments of stamens in flower is seen in *Salvia* and mustard.
(C) In sunflower and marigold, the placenta forms a ridge along the ventral suture of the ovary and ovules are borne on this ridge.
(D) In mustard, ovary is one-chambered but it becomes two chambered due to the formation of false septum.
The **correct** statements are
(1) Only (A) and (D) (2) Only (B), (C) and (D)
(3) Only (A), (B) and (D) (4) (A) and (C)

109. In floral formula, symbol $\overline{G}$ stands for
(1) Half inferior ovary (2) Half superior ovary
(3) Inferior ovary (4) Superior ovary

110. Which of the following groups of plants belong to that family in which all the given characteristics are seen?
a. Exstipulated leaves
b. Solitary, axillary or cymose inflorescence
c. Gamosepalous, persistent calyx
d. Endospermous seed
e. Swollen placenta with many ovules
(1) Potato, Mustard, China rose
(2) Pea, Chilli, Mustard
(3) Lily, Mustard, Chilli
(4) Belladonna, Ashwagandha, *Petunia*

111. In which of the following aspects, tap root and adventitious root are **not** similar?
(1) They provide anchorage to the plant parts
(2) They store reserve food material
(3) They absorb water and minerals from the soil
(4) They arise from the radicle

112. Successive order of floral appendages is
(1) Calyx → corolla → Gynoecium → Androecium
(2) Corolla → Calyx → Androecium → Gynoecium
(3) Calyx → corolla → Androecium → Gynoecium
(4) Androecium → Gynoecium → Calyx → Corolla

113. The following is the floral formula of a plant family

$\oplus\ \male\ K_{(5)}\ \overset{\frown}{C}_{(5)}\ A_5\ \underline{G}_{(2)}$

From the options given below, choose the plant member of the family to which the formula belongs.
(1) *Petunia* (2) *Gloriosa*
(3) *Indigofera* (4) *Trifolium*

114. Whorled phyllotaxy is present in
(1) *Alstonia* (2) *Calotropis*
(3) Mustard (4) Guava

115. Half inferior ovary is seen in
(1) Guava (2) Cucumber
(3) Peach (4) Ray florets of sunflower

116. Which of the given is correct w.r.t. floral formula of mustard family?
(1) ♀ (2) $K_{(5)}$
(3) A_{2+4} (4) $\overline{G}_{(2)}$

117. The remains of nucellus in seeds present in some plants, is called
(1) Endosperm (2) Perisperm
(3) Scutellum (4) Pericarp

118. In maize seed, protein is stored in
(1) Embryo (2) Pericarp
(3) Seed coat (4) Aleurone layer

119. Fruit is called silicula or siliqua in the members of family
(1) Cruciferae (2) Compositae
(3) Gramineae (4) Malvaceae

120. Margins of petals overlap each other but not in a definite manner in
(1) *Calotropis* (2) *Cassia*
(3) China rose (4) *Solanum nigrum*

121. Read the following assertion and reason and choose the correct option.
Assertion : Leaflets are attached at a common point *i.e.* at the tip of petiole in palmately compound leaves.
Reason : A bud is present in the axil of petiole in both simple and compound leaves.
(1) Both Assertion & Reason are true and the reason is the correct explanation of the assertion
(2) Both Assertion & Reason are true but the reason is not the correct explanation of the assertion
(3) Assertion is true statement but Reason is false
(4) Both Assertion and Reason are false statements

122. Seed coat is membranous and generally fused with the fruit wall in
(1) Gram (2) Pea
(3) Maize (4) Mango

123. Find the **odd** one out w.r.t. leaf parts.
(1) Leaf base (2) Petiole
(3) Peduncle (4) Lamina

124. In hypogynous flowers, ovary
(1) Is located at the rim of thalamus
(2) Is said to be half-inferior
(3) Occupies the highest position
(4) Is completely fused with thalamus

125. Tuber of potato is
(1) Endospermic seed (2) Pseudocarpic fruit
(3) Edible underground stem (4) Proteinaceous seed

126. Select the **odd** one for corolla.
(1) They are of various shapes tubular, funnel or wheel-shaped
(2) They are brightly coloured in insect pollinated flowers
(3) They may be united with each other called gamotepalous
(4) Their number varies among plant species

127. Which of the following is **incorrect** about the structures borne on the stem that are lateral and generally flattened?
(1) These originate from shoot apical meristems and are arranged in an acropetal order.
(2) Base of these structures expand into a sheath covering the stem partially or wholly in monocots.
(3) These are the most important vegetative organs for photosynthesis.
(4) They develop at the nodes but do not bear a bud in its axil.

128. In a compound leaf
(1) Each leaflet has an axillary bud
(2) Midrib forms common axis called rachis
(3) Only parallel venation is found
(4) Petiole is absent

129. In lotus
(1) Carpels are united
(2) Carpels are free
(3) Ovary is syncarpous
(4) Only one carpel is present

130. Match the column-I with column-II and choose the **correct** option.

Column-I	Column-II
a. Basal placentation	(i) It is found in pea plant
b. Free central placentation	(ii) Ovules develop on the inner wall of the ovary
c. Marginal placentation	(iii) Placenta develops at the base of the ovary
d. Parietal placentation	(iv) Ovules are borne on central axis and septa are absent

(1) a-(iv), b-(i), c-(ii), d-(iii) (2) a-(iii) b-(iv), c-(i), d-(ii)
(3) a-(iii), b-(i), c-(iv), d-(ii) (4) a-(iii), b-(iv), c-(ii), d-(i)

131. In tomato, gynoecium is
(1) Bicarpellary and superior
(2) Bicarpellary and inferior
(3) Monocarpellary and inferior
(4) Tricarpellary and superior

132. The outer covering of endosperm in endospermic seeds, which separates it from the embryo, is called
(1) Coleorhiza (2) Scutellum
(3) Coleoptile (4) Aleurone layer

133. Find the actinomorphic flowers group
(1) Mustard, *Datura*, pea (2) Mustard, *Datura*, chilli
(3) Pea, gulmohur, chilli (4) *Canna*, *cassia*, bean

134. Select the **incorrectly** matched pair
(1) Perianth – Found in flowers where calyx and corolla are indistinguishable
(2) Unisexual flower – Presence of either stamen or carpel
(3) Cruciform corolla – It is found in the flower of mustard
(4) Epicarp – Fruit wall that is differentiated into three layers

135. In roots, the zone which is proximal to the region of elongation
(1) Has epidermal cells that form thread like root hairs
(2) Has thick walled cells that divide repeatedly
(3) Is covered by a thimble-like structure
(4) Has cells that undergo enlargement for growth of root in length

ZOOLOGY

136. The striated appearance of skeletal muscle fibres is due to organized presence of
(1) Keratin and actin (2) Actin and myosin
(3) Collagen and keratin (4) Actin and collagen

137. Order of toxicity among nitrogenous waste products from highest to lowest is
(1) Uric acid > ammonia > urea
(2) Uric acid < ammonia < urea
(3) Urea > uric acid > ammonia
(4) Ammonia > urea > uric acid

138. Portion between two successive Z-lines in a skeletal muscle is called
(1) Sarcomere (2) Sarcoplasm
(3) Sarcolemma (4) Sarcoplasmic reticulum

139. In human kidneys, the cortex extends in between the medullary pyramids as renal columns called
(1) Hilum (2) Calyces
(3) Columns of Bertini (4) Capsule

140. Which of the following is not a correct point of difference between a red muscle fibre and a white muscle fibre?

	Red muscle fibre	White muscle fibre
(1)	High myoglobin content	Very low myoglobin content
(2)	High amount of sarcoplasmic reticulum	Low amount of sarcoplasmic reticulum
(3)	More number of mitochondria	Less number of mitochondria
(4)	Reddish in appearance	Pale or whitish in appearance

(1) (1) (2) (2)
(3) (3) (4) (4)

141. Selective secretion of H^+ and K^+ occurs in
(1) PCT and Henle's loop
(2) DCT and Henle's loop
(3) Collecting duct and DCT
(4) Collecting duct and Henle's loop

142. Numerous DCT open into
(1) Bowman's capsule
(2) Collecting duct
(3) Proximal convoluted tubule
(4) Glomerulus

143. A motor neuron along with muscle fibres connected to it constitute a
(1) Motor-end plate (2) Motor unit
(3) Neuromuscular junction (4) Synaptic cleft

144. In a healthy human, the average pH of human urine is
(1) 4.5 (2) 9
(3) 6 (4) 8.4

145. **Assertion:** In descending limb of loop of Henle, filtrate becomes hypertonic to blood plasma.
Reason: Descending limb of loop of Henle is permeable to water but almost impermeable to electrolytes.
In the light of above statements, select the **correct** option.
(1) Both Assertion & Reason are true and the reason is the correct explanation of the assertion
(2) Both Assertion & Reason are true but the reason is not the correct explanation of the assertion
(3) Assertion is true statement but Reason is false
(4) Both Assertion and Reason are false statements

146. Each organised skeletal muscle in our body is made of a number of muscle bundles held together by a common collagenous connective tissue layer, called
(1) Fascicle (2) Fascia
(3) Muscle fibre (4) Myofibril

147. Which statement is **not** correct for muscle contraction?
(1) Length of actin and myosin filaments remains unchanged
(2) Length of I-band decreases and A-band remains unchanged
(3) Length between two successive Z-lines decreases
(4) Length of H-zone remains unchanged but overlapping zone between actin and myosin filaments increases

148. Smooth muscle fibres differ from skeletal muscle fibres in all of the following features, **except**
(1) Location of nucleus (2) Appearance
(3) Shape (4) Absence of branching

149. Which of the following would help in prevention of diuresis?
(1) Reabsorption of Na^+ and water from renal tubules due to aldosterone
(2) Release of atrial natriuretic factor that causes vasoconstriction
(3) Decrease in secretion of renin by JG cells
(4) More water reabsorption due to undersecretion of ADH

150. During the process of tubular reabsorption in humans, all of the following substances are reabsorbed actively, **except**
(1) Glucose (2) Amino acids
(3) Na^+ (4) Urea

151. In human body, which of the following set of cells shows pseudopodial movements?
(1) Hepatocytes and erythrocytes
(2) Macrophages and leucocytes
(3) Leucocytes and spermatozoa
(4) Macrophages and thrombocytes

152. Choose the **false** statement.
(1) Vasa recta is absent or highly reduced in cortical nephrons
(2) The malpighian corpuscles are situated in the cortical region of the kidney
(3) In juxta medullary nephrons, the loop of Henle extends only very little into the medulla
(4) Podocytes are epithelial cells of Bowman's capsule and are arranged in an intricate manner forming slit pores

153. The HMM component of meromyosin consists of
(1) Globular head only
(2) Globular head with short arm
(3) Short arm with a tail
(4) Tail only

154. **Assertion (A) :** All locomotions are movements but all movements are not locomotions.
Reason (R) : Locomotion results in change of place or location for food, shelter, mate or to escape from predators where as movement may or may not include change of place.
In the light of above statements, select the **correct** option.
(1) Both Assertion and Reason are true and Reason is the correct explanation of the Assertion.
(2) Both Assertion and Reason are true but Reason is not the correct explanation of the Assertion.
(3) Assertion is true statement but Reason is false.
(4) Both Assertion and Reason are false statements,.

Dream NEET

155. During contraction of skeletal muscles, which of the following event causes the breakdown of cross-bridge between actin and myosin?
(1) Binding of ADP with actin
(2) Removal of ADP and creatinine from myosin head
(3) Binding of new ATP with myosin head
(4) Breakdown of ATP

156. Consider the following parts:
(a) Collecting duct
(b) Calyx
(c) Renal pelvis
(d) Ureter
Which of the following options represents the correct pathway of urine drainage in human body?
(1) (a) → (b) → (c) → (d) (2) (b) → (a) → (c) → (d)
(3) (c) → (a) → (b) → (d) (4) (b) → (c) → (a) → (d)

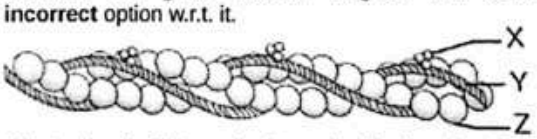

157. The **incorrect** fact about myosin is that
(1) It is a polymerized protein
(2) Its monomeric unit consists of a tail, short arm and head
(3) It is one of the contractile proteins
(4) It is main regulatory protein in the process of muscle contraction

158. Which part of nephron reabsorbs maximum water even in the presence of anti-diuretic hormone?
(1) Distal convoluted tubule
(2) Proximal convoluted tubule
(3) Henle's loop
(4) Bowman's capsule

159. In humans, the part of myofilament which has binding sites for ATP and active sites for thin filaments is
(1) Head of heavy meromyosin
(2) Short arm of light meromyosin
(3) Tail part of light meromyosin
(4) Short arm of heavy meromyosin

160. Kidneys are located close to the dorsal inner wall of the abdominal cavity between the levels of
(1) 12th thoracic and 3rd lumbar vertebra
(2) 7th cervical and 3rd thoracic vertebra
(3) Last sacral and 1st caudal vertebra
(4) 1st lumbar and 5th lumbar vertebra

161. Consider the given labelled diagram and select the **incorrect** option w.r.t. it.

(1) A subunit of 'X' masks the active binding sites for myosin on the thin filament
(2) Each 'Z' is a polymer of monomeric G-actins.
(3) 'Y' is a homopolymer of glucose.
(4) 'X' is a trimeric protein.

162. Muscle fibres of which of the following organs exhibit striations?
(1) Heart (2) Fallopian tube
(3) Intestine (4) Uterus

163. Which of the following does not participate in the formation of filtration membrane through which ultrafiltration occurs in a nephron?
(1) The epithelium of Bowman's capsule
(2) Basement substance
(3) Brush border epithelium of collecting duct
(4) The endothelium of glomerular blood capillaries

164. A survey of animal kingdom presents a variety of excretory structures. Which of the following is the correct matching set of organism and its excretory structure?

Organism	Excretory structure
(1) Scorpions and spiders	Antennal glands
(2) Cockroach	Protonephridia
(3) Crustaceans like prawns	Green gland
(4) *Amphioxus*	Kidney

(1) (1) (2) (2)
(3) (3) (4) (4)

165. In a skeletal muscle fibre, Ca^{2+} is stored in
(1) Sarcolemma (2) Plasma membrane
(3) Sarcoplasmic reticulum (4) Synaptic vesicles

166. In humans, Malpighian body consists of
(1) Bowman's capsule with peritubular capillaries
(2) Only glomerulus with Juxtaglomerular apparatus
(3) Glomerulus with Bowman's capsule
(4) Bowman's capsule with collecting duct

167. Which of the following does not involve ciliary movement?
(1) Passage of ova through female reproductive tract
(2) Swimming of human spermatozoa
(3) Movement of food through cytopharynx in *Paramoecium*
(4) Movement of mucus in specific direction in human respiratory tract

168. NaCl is transported by the A of Henle's loop which is exchanged with B of vasa recta and is returned to the interstitium by the ascending portion of C.
Identify A, B and C and choose the **correct** option.

A	B	C
(1) Descending limb	Ascending limb	Henle's loop
(2) Ascending limb	Descending limb	Vasa recta
(3) Descending limb	Descending limb	Henle's loop
(4) Ascending limb	Ascending limb	Vasa recta

(1) (1) (2) (2)
(3) (3) (4) (4)

169. Sliding filament theory of muscle contraction suggests that the contractile polymerised molecule which moves to shorten a muscle is
(1) Troponin (2) Collagen
(3) Actin (4) Myosin

170. Match column A and B. Choose the **correct** option.

Column A	Column B
a. 'I' band	(i) Has only myosin filaments
b. 'A' band	(ii) Has only actin filaments
c. 'H' zone	(iii) Has both actin and myosin filaments
d. 'Z' line	(iv) A membrane to which actin filaments are attached

(1) a(i), b(ii), c(iii), d(iv) (2) a(ii), b(iii), c(i), d(iv)
(3) a(iii), b(iv), c(ii), d(i) (4) a(iv), b(i), c(iii), d(ii)

171. Under normal physiological conditions, on an average how much urea is excreted, by an adult healthy human through urine per day?
(1) 80 – 100 gm (2) 1 – 2 gm
(3) 25 – 30 gm (4) 60 – 80 gm

172. The signals of micturition are initiated by
(1) Stretching of urethra
(2) Stretching of urinary bladder
(3) Relaxation of the urethral sphincter
(4) Contraction of urinary bladder

DreamNEET
Aakash Medical IIT-JEE Foundation
CC-48B

173. Select **incorrect** statement w.r.t. muscles in a healthy human
(1) About 40 to 50 per cent of the body weight is contributed by skeletal muscles only
(2) Muscles are specialised tissue of mesodermal origin
(3) Bones interact with skeletal muscles attached to them to bring about movements
(4) Muscles fibres have special properties like excitability, contractility, extensibility and elasticity

174. Sweat produced by the sweat glands is a watery fluid which does **not** contain
(1) NaCl
(2) Urea
(3) Lactic acid
(4) Sterols

175. In a nephron, the glomerulus is a tuft of capillaries formed by
(1) Afferent arteriole, a fine branch of renal artery
(2) Efferent arteriole, a fine branch of renal vein
(3) Efferent arteriole, a fine branch of renal artery
(4) Afferent arteriole, a fine branch of renal vein

176. The increase in osmolarity from cortex to medullary interstitium is mainly due to
(1) Urea only
(2) H^+ and K^+
(3) NH_4^+ and K^+
(4) Urea and NaCl

CC-483

177. Match column I with column II w.r.t values of given parameters per minute in a healthy man.

	Column I		Column II
(a)	Amount of CO_2 removed by lungs	(i)	5040 mL
(b)	Amount of blood filtered by kidneys	(ii)	125 mL
(c)	Glomerular filtration rate	(iii)	1100-1200 mL
(d)	Blood pumped out by each ventricle of the heart	(iv)	200 mL

Select the **correct** option.
(1) a(i), b(iii), c(iv), d(ii)
(2) a(iv), b(iii), c(ii), d(i)
(3) a(ii), b(i), c(iv), d(iii)
(4) a(ii), b(iii), c(iv), d(i)

178. Which one is **not** a part of renal tubule?
(1) Bowman's capsule
(2) Collecting duct
(3) Proximal convoluted tubule
(4) Distal convoluted tubule

179. Insoluble mass of crystallised salts formed within the kidney is termed
(1) Glomerulonephritis
(2) Gout
(3) Renal calculi
(4) Glycosuria

180. The peritubular capillaries of the kidneys directly branch from the
(1) Afferent arteriole
(2) Efferent arteriole
(3) Renal artery
(4) Renal vein
