MM : 720

Fortnightly Test for NEET-2027 (XII-Passed)_FT05A

Time : 180 Min.

Topics Covered:
Physics: Thermal Properties of Matter, Thermodynamics, Kinetic Theory
Chemistry: Equilibrium
Botany: Anatomy of Flowering Plants
Zoology: Locomotion & Movement-II: (Upto muscles and bone disorders), Neural Control & Coordination

General Instructions :
Duration of Test is 3 hrs.
The Test consists of 180 questions. The maximum marks are 720.
There are four parts in the question paper consisting of Physics, Chemistry, Botany and Zoology having 45 questions in each part of equal weightage.
Each question carries +4 marks. For every wrong response, –1 mark shall be deducted from the total score. Unanswered/unattempted questions will be given no marks.
Use blue/black ballpoint pen only to darken the appropriate circle. CC-473 CC-473
Mark should be dark and completely fill the circle.
Dark only one circle for each entry.
Dark the circle in the space provided only.
Rough work must not be done on the Answer sheet and do not use white fluid or any other rubbing material on the Answer sheet.

PHYSICS

1. Starting from same initial conditions an ideal gas expands from volume V_1 to V_2 in three different ways. The work done is W_1 in isothermal process, W_2 in adiabatic process and W_3 in isobaric process. Then
(1) $W_1 > W_2 > W_3$ (2) $W_3 > W_2 > W_1$
(3) $W_3 > W_1 > W_2$ (4) $W_2 > W_3 > W_1$

2. Select the correct statement(s) regarding heat transfer
(1) Natural convection requires gravity
(2) Forced convection can occur in both spaces having gravity and gravity free
(3) Radiation occurs in space only where gravity is present
(4) Both (1) & (2)

3. A tap supplies water at 10°C and another tap at 100°C. Amount of hot water which should be taken, so that we get 20 kg water at 35°C, is nearly
(1) 7.2 kg (2) 10 kg
(3) 5.6 kg (4) 14.4 kg

4. The relation between coefficient of linear expansion α and coefficient of volume expansion γ for isotropic solid is
(1) $\gamma = 2\alpha$ CC-473 (2) $3\gamma = \alpha$
(3) $\gamma = 3\alpha$ (4) $2\gamma = 3\alpha$

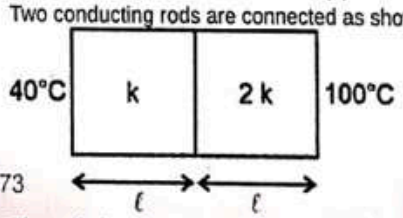

5. If the temperatures of sun increased by 2% then the value solar constant will change by
(1) 8% (2) – 8%
(3) 4% (4) – 4%

6. The wavelength corresponding to maximum intensity in radiation is equal to λ when the temperature of the body is 400 K. If the temperature is increased by 800 K, the corresponding wavelength decreases by an amount
(1) 2λ/3 (2) λ
(3) λ/3 (4) λ/4

7. A scale of temperature *A* has lower and upper fixed points – 20° and 100° respectively. Another scale of temperature *B* has lower and upper fixed points 10° and 90° respectively. The temperature at which the two scales will show the same reading is
(1) 30° (2) 40°
(3) 70° (4) 60°

8. A ball of mass 0.2 kg is heated to 10°C and put into a block of ice at 0°C. 25 grams of ice melts. If latent heat of fusion of ice is 80 cal/g then specific heat of material of ball is (cal g^{-1} $(C°)^{-1}$)
(1) 0.1 (2) 1
(3) 0.8 (4) 1.6

9. Two conducting rods are connected as shown

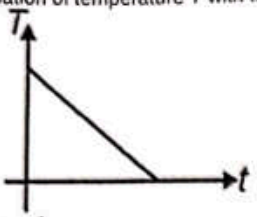

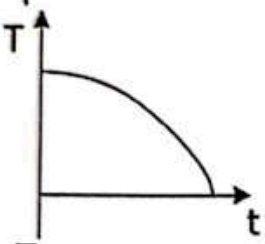

CC-473 CC-473
The rods have same length and same cross-section area. In the steady state the temperature of the interface will be (in °C)
(1) 70°C (2) 60°C
(3) 80°C (4) 90°C

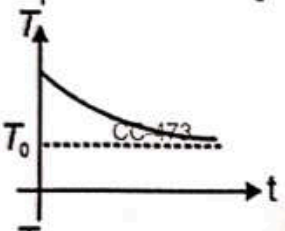

10. Two spheres of same material having radii 1 m and 2 m are at temperature of 2000 K and 1000 K respectively. The ratio of energy radiated in unit time is
(1) 2 (2) 4
(3) 8 (4) 32

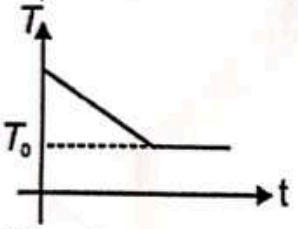

Scanned with OKEN Scanner

11. An object is allowed to cool in a colder surroundings at temperature T_0. If T is the temperature of object, the correct variation of temperature T with time is

(1) 

(2) 

(3) 

(4) 

12. Coefficient of linear expansion of a substance along three mutually perpendicular direction are 4×10^{-2}/°C, 5×10^{-2}/°C and 1×10^{-2}/°C. The coefficient of cubical expansion of the substance is

(1) 6×10^{-2}/°C (2) 10×10^{-2}/°C
(3) 1.5×10^{-3}/°C (4) 1000×10^{-2}/°C

13. A body cools from a temperature $3T$ to $2T$ in 10minutes. The room temperature is T. Assume that Newton's law of cooling is applicable. The temperature of the body at the end of next 10 minutes will be

(1) $\frac{7}{4}T$ (2) $\frac{3}{2}T$
(3) $\frac{4}{3}T$ (4) T

14. A metallic bar of Young's modulus, 0.5×10^{11} N m^{-2} and coefficient of linear thermal expansion 10^{-5} °C^{-1}, length 1 m and area of cross-section 10^{-3} m^2 is heated from 0°C to 100°C without expansion or bending. The compressive force developed in it is:

(1) 5×10^3 N (2) 50×10^3 N
(3) 100×10^3 N (4) 2×10^3 N

15. If transmission power of a surface is $\frac{1}{9}$, reflective power is $\frac{1}{6}$, then what is its absorptive power?

(1) $\frac{18}{13}$ (2) $\frac{13}{18}$
(3) $\frac{3}{13}$ (4) $\frac{13}{3}$

16. Match the thermodynamics process given in column I with their corresponding features in column II.

Column I (Type of process)	Column II (Features)
a. Isothermal	(i) Pressure constant
b. Isobaric	(ii) Volume constant
c. Isochoric	(iii) No heat exchange between system and surrounding
d. Adiabatic	(iv) Temperature constant

(1) a(i), b(ii), c(iii), d(iv) (2) a(ii), b(iii), c(iv), d(i)
(3) a(iv), b(i), c(ii), d(iii) (4) a(ii), b(iv), c(iii), d(i)

17. When some heat is added to a gaseous system, then select correct statement.

(1) Its temperature must increase
(2) Its temperature may increase
(3) Its temperature may remains unchanged
(4) Both (2) & (3)

18. Consider the following statements:

Statement A: For an ideal gas, the change in internal energy of gas and work interaction of the gas are equal in magnitude in an adiabatic process.

Statement B: The internal energy does not change in an isothermal process for an ideal gas.

Based upon above information, pick correct option.

(1) Both statements A and B are correct
(2) Both statements A and B are incorrect
(3) Statement A is correct while B is incorrect
(4) Statement A is incorrect while B is correct

19. An ideal monoatomic gas is made to undergo a process $P \propto V$ then molar heat capacity of the gas for the process is

(1) R (2) $2R$
(3) $3R$ (4) $4R$

20. A monatomic gas undergoes a isobaric expansion such that work done is x times the increase in internal energy. Then x is

(1) $\frac{7}{5}$ (2) $\frac{2}{5}$
(3) $\frac{1}{5}$ (4) $\frac{2}{3}$

21. During an adiabatic expansion of 5 moles of gas, the internal energy decrease by 75 J. The work done during the process is

(1) Zero (2) 15 J
(3) –75 J (4) + 75 J

22. An ideal gas is allowed to expands from volume V to $2V$ according to the law VP^2 = Constant. If initial temperature of the gas is 'T' then its final temperature will be

(1) T (2) $2T$
(3) $T\sqrt{2}$ (4) $\frac{T}{\sqrt{2}}$

Scanned with OKEN Scanner

23. A : Molar heat capacity of a gas is zero for adiabatic process.
R : Adiabatic process does not allow heat exchange.
(1) Both Assertion & Reason are true and the reason is the correct explanation of the assertion
(2) Both Assertion & Reason are true but the reason is not the correct explanation of the assertion
(3) Assertion is true statement but Reason is false
(4) Both Assertion and Reason are false statements

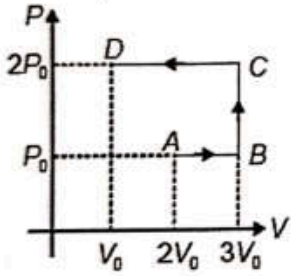

24. $\Delta Q = \Delta U$ is valid for
(1) Isothermal process (2) Adiabatic process
(3) Isochoric process (4) Isobaric process

25. Five moles of oxygen gas are heated from 40°C to 70°C at constant pressure. Heat given to the gas will be (given R = 2 cal/mol K)
(1) 525 cal (2) 750 cal
(3) 1500 cal (4) 1050 cal

26. Which of the following is not law of thermodynamics adiabatic process?
(1) PV^{γ} = constant (2) $VT^{\frac{1}{\gamma-1}}$ = constant
(3) $PT^{\frac{\gamma}{1-\gamma}}$ = constant (4) $PT^{\frac{1}{1-\gamma}}$ = constant

27. A : For an isochoric process, slope of P-V graph is infinite.
R : For an isochoric process, the pressure remain constant.
(1) Both Assertion & Reason are true and the reason is the correct explanation of the assertion
(2) Both Assertion & Reason are true but the reason is not the correct explanation of the assertion
(3) Assertion is true statement but Reason is false
(4) Both Assertion and Reason are false statements

28. P-V diagram of an ideal gas is shown in the figure. Net work done in the process $ABCD$ is

(1) P_0V_0 (2) $-4P_0V_0$
(3) $-3P_0V_0$ (4) $3P_0V_0$

29. If C_p for a monatomic gas is $\frac{5}{2}R$ then C_V for the gas will be
(1) $2R$ (2) $\frac{5}{2}R$
(3) $\frac{2}{3}R$ (4) $\frac{3}{2}R$

30. Which of the following ratio is correct for isobaric process?
(1) $Q:\Delta U = 1:1$ (2) $Q:\Delta W = (\gamma-1):\gamma$
(3) $Q:\Delta U = \gamma:1$ (4) $Q:\Delta W = 1:\gamma$

31. Match the List I and List II. (Symbols have their usual meanings)

List I	List II
a. v_{rms}	(i) $\frac{3}{2}k_BT$
b. Pressure (P)	(ii) nC_VT
c. Translational K.E. per molecule	(iii) $\sqrt{\frac{3RT}{M}}$
d. U (Internal energy)	(iv) $\frac{1}{3}\rho v_{rms}^2$

(1) a(iii), b(iv), c(ii), d(i) (2) a(iii), b(iv), c(i), d(ii)
(3) a(iii), b(ii), c(i), d(iv) (4) a(iii), b(i), c(iv), d(ii)

32. **Statement A:** The value of $\frac{C_V}{C_P}$ for a monoatomic gas will be less as compared to that of a diatomic gas. (Symbols have their usual meanings)
Statement B: The molecules of a diatomic gas have more degree of freedom than those of monoatomic gas.
(1) Both statement (A) and statement (B) are correct
(2) Both statement (A) and statement (B) are incorrect
(3) Statement (A) is correct and statement (B) is incorrect
(4) Statement (A) is incorrect and statement (B) is correct

33. Consider the following statements about kinetic theory of gases:
(A) The total kinetic energy of a gas is independent of its temperature.
(B) The rms speed of gas molecules increases with increase in temperature.
(C) All molecules of a gas move with the same velocity at a given temperature
Which of the above statement(s) is/are correct?
(1) Both (A) and (B) (2) Only (B)
(3) Only (C) (4) Both (B) and (C)

34. The mean free path of the molecules of an ideal gas is
(1) Directly proportional on pressure
(2) Directly proportional on volume
(3) Inversely proportional on volume
(4) Inversely proportional on temperature

35. A gas has molar heat capacity $C = \frac{7R}{2}$ in the process PT = constant. The number of degrees of freedom of molecules in the gas is
(1) 1 (2) 2
(3) 3 (4) 4

36. A graph between pressure P and $\frac{1}{V}$ (where V is volume) for an ideal gas at constant temperature is
(1) Parabola (2) Rectangular hyperbola
(3) Ellipse (4) Straight line

37. One mole of ideal monoatomic gas is mixed with one mole of diatomic gas. The specific heat ratio $\left(\frac{C_p}{C_v}\right)$ for the mixture is
(1) 1.4 (2) 1.6
(3) 1.5 (4) 1.3

38. The thermal capacity of 50 g of aluminium is (Specific heat = 0.2 cal/g°C)
(1) 20 cal/°C (2) 200 cal/°C
(3) 10 cal/°C (4) 100 cal/°C

39. A mixture of 3 moles of helium gas and 2 moles of neon gas (atomic mass = 22 u) is kept at 127°C in a container. The ratio of their rms speeds is
(1) 24 (2) 4.3
(3) 23 (4) 2.3

Scanned with OKEN Scanner

40. Which of the following is not an assumption of kinetic theory of gases?
(1) Space occupied by molecules is much smaller than volume of gas
(2) There is force of interaction between the molecules
(3) Pressure of the gas is due to elastic collision of gas molecules with the walls of the container
(4) The molecules are moving randomly in all directions

41. Average kinetic energy of a gas molecule at 27°C is 6.2×10^{-21} J. Its average kinetic energy at 227°C is
(1) 10.34×10^{-21} J (2) 6.2×10^{-21} J
(3) 5.87×10^{-20} J (4) 9.4×10^{-18} J

42. The ratio of average speed (V_{av}) of an ideal gas to the most probable speed (V_{mp}) of gas will be
(1) $\sqrt{\frac{3}{2}}$ (2) $\sqrt{\frac{8}{3\pi}}$
(3) $\frac{2}{\sqrt{\pi}}$ (4) 1

43. The degrees of freedom of CO gas molecule at high temperature is
(1) 6 (2) 7
(3) 3 (4) 8

44. Internal energy of n_1 moles of hydrogen at temperature T is equal to the internal energy of n_2 moles of helium at temperature $2T$. Then the ratio $\frac{n_1}{n_2}$ is
(1) $\frac{2}{3}$ (2) $\frac{3}{5}$
(3) $\frac{6}{5}$ (4) $\frac{1}{2}$

45. A real gas behaves like an ideal gas at
(1) Low pressure, high temperature
(2) Low pressure, low temperature
(3) High pressure, low temperature
(4) High pressure, high temperature

CHEMISTRY

46. Select the incorrect statement regarding physical equilibria.
(1) Equilibrium is possible in closed system
(2) All measurable properties of the system remain constant
(3) Both the opposing processes stops at equilibrium
(4) At equilibrium there is a dynamic but stable conditions

47. Which of the following will change the value of equilibrium constant?
(1) Change in pressure
(2) Change in concentration of product
(3) Change in amount of catalyst
(4) Change in temperature

48. For the reaction,
$FeO(s) + CO(g) \rightleftharpoons Fe(s) + CO_2(g)$
(K_p = 0.5). The equilibrium partial pressure of CO_2 if the intial partial pressure of CO is 3 atm, will be
(1) 3 atm (2) 2 atm
(3) 1 atm (4) 0.5 atm

49. If the value of equilibrium constant of the reaction $N_2(g) + 3H_2(g) \rightleftharpoons 2NH_3(g)$ is 16, then the equilibrium constant of the reaction, $NH_3(g) \rightleftharpoons \frac{1}{2}N_2(g) + \frac{3}{2}H_2(g)$ will be
(1) 0.25 (2) 4
(3) 0.5 (4) 0.125

50. Match List I with List II

	List-I (Reactions)		List-II (K_c/K_p)
a.	$2NH_3(g) \rightleftharpoons N_2(g) + 3H_2(g)$	(i)	1
b.	$H_2(g) + I_2(g) \rightleftharpoons 2HI(g)$	(ii)	RT
c.	$4NH_3(g) + 5O_2(g) \rightleftharpoons 4NO(g) + 6H_2O(g)$	(iii)	$\frac{1}{(RT)^2}$
d.	$PCl_3(g) + Cl_2(g) \rightleftharpoons PCl_5(g)$	(iv)	$\frac{1}{RT}$

Choose the **correct** option
(1) a-(iii), b-(i), c-(ii), d-(iv) (2) a-(iii), b-(i), c-(iv), d-(ii)
(3) a-(iv), b-(iii), c-(ii), d-(i) (4) a-(iv), b-(ii), c-(i), d-(iii)

51. Out of the following, the example of homogeneous equilibrium is
(1) $CaCO_3(s) \rightleftharpoons CaO(s) + CO_2(g)$
(2) $Ni(s) + 4CO(g) \rightleftharpoons Ni(CO)_4(g)$
(3) $CH_3COOC_2H_5(aq) + H_2O(l) \rightleftharpoons CH_3COOH(aq) + C_2H_5OH(aq)$
(4) $Ag_2O(s) + 2HNO_3(aq) \rightleftharpoons 2AgNO_3(aq) + H_2O(l)$

52. In closed system : $P(s) \rightleftharpoons 2Q(g) + 3R(g)$
if the partial pressure of R is tripled then partial pressure of Q will become
(1) Half of its original pressure
(2) Twice of the original pressure
(3) $\frac{1}{3\sqrt{3}}$ times the original pressure
(4) $2\sqrt{2}$ times its original pressure

53. For the given reaction
$A_2 + B_2 \rightleftharpoons 2AB$
The initial molar concentration of A_2, B_2 and AB is 6M, 5M and 2.5M respectively. If molar concentration of AB at equilibrium becomes 4.5M then the equilibrium constant of the reaction will be
(1) 2.01 (2) 1.01
(3) 4.51 (4) 2.81

54. Consider the following statements:
Statement I: If $K_c > 10^3$ reactants predominates over products
Statement II: If $K_c < 10^{-3}$ products predominates over reactants.
In the light of above statements, choose the **most appropriate** answer from the options given below.
(1) Both statement I and statement II are correct
(2) Both statement I and statement II are incorrect
(3) Statement I is correct but statement II is incorrect
(4) Statement I is correct but statement II is correct

55. The molar solubility of CaF_2 ($K_{sp} = 7.2 \times 10^{-9}$) in 0.1 M solution of NaF will be
(1) 7.2×10^{-7} mol L^{-1} (2) 7.2×10^{-10} mol L^{-1}
(3) 7.2×10^{-8} mol L^{-1} (4) 7.2×10^{-11} mol L^{-1}

Scanned with OKEN Scanner

56. Consider the following equilibrium reaction.
$2NO(g) + O_2(g) \rightleftharpoons 2NO_2(g)$, if helium gas at constant pressure is added to the above equilibrium then
(1) Formation of NO_2 will increase
(2) Dissociation of NO_2 will increase
(3) Equilibrium constant K_c will increase
(4) Equilibrium constant K_p will increase

57. Aqueous solution of which salt is neutral at 25°C?
(1) NH_4Cl (2) Na_3PO_4
(3) $NaNO_3$ (4) HCOONa

58. The pH of 10^{-8} M NaOH solution is?
(1) 6.98 (2) 6
(3) 7.04 (4) 8

59. The species which can act both as Bronsted acid and base is
(1) CO_3^{2-} (2) NO_3^-
(3) HSO_4^- (4) SO_4^{2-}

60. The value of ΔG° at 300 K if equilibrium constant for the reaction = 10^2 is (R = gas constant)
(1) –300 R (2) –2.303 × 600 R
(3) –2.303 × 300 R (4) –600 R

CC-473

61. The pH of the solution obtained by mixing 250 ml, 0.2 M CH_3COOH and 200 ml 0.1 M NaOH is (Given: pK_a of CH_3COOH = 4.74, log 3 = 0.48)
(1) 5.22 (2) 4.92
(3) 4.56 (4) 5.04

62. If K_a for an acid is 10^{-6}, then the value of pK_b for its conjugate base is
(1) 6 (2) 8
(3) 10 (4) 14

63. The compound that is not a Lewis acid is
(1) $B(OH)_3$ (2) $AlCl_3$
(3) B_2H_6 (4) NH_3

64. 100 ml of HCl solution whose pH is 2, is diluted to 1 litre, the pH of the resulting solution is
(1) 1 (2) 2
(3) 3 (4) 2.5

65. At 85°C, distilled water has $[H_3O^+]$ concentration equal to 1 × 10^{-6} mole/litre. The value of K_w at this temperature will be
(1) 1×10^{-8} (2) 1×10^{-14}
(3) 1×10^{-12} (4) 1×10^{-7}

66. Consider the following statements:
Statement I: For oxalic acid, the higher order ionisation constant $(K_{a_2})$is smaller than the lower order ionization constant (K_{a_1}).
Statement II: It is more difficult to remove a proton from a negatively charged HCO_3^- as compared to H_2CO_3.
In the light of above statements, choose the correct option.
(1) Both statement I and statement II are correct
(2) Both statement I and statement II are incorrect
(3) Statement I is correct but statement II is incorrect
(4) Statement I is incorrect but statement II is correct

CC-473

67. Buffer solution is prepared by mixing
(1) NaCl (0.01 M, 100 mL) + KCl (0.1 M, 100 mL)
(2) K_2SO_4(0.1 M, 300 mL) + H_2SO_4(0.2 M, 100 mL)
(3) CH_3COOH (0.2 M, 200 mL) + NaOH (0.2 M, 50 mL)
(4) NaCl (0.1 M, 300 mL) + HCl (0.2 M, 100 mL)

68. If equal volumes of HCl with pH 2 and 3 are mixed together, then pH of resultant solution will be nearly (log 5.5 = 0.74)
(1) 4.3 (2) 1.74
(3) 3.3 (4) 2.3

69. Incorrect statement about a catalyst is
(1) It increases the activation energy for the forward and reverse reaction
(2) It does not appear in the balanced chemical equation
(3) It increases the rate of the chemical reaction
(4) It does not change the equilibrium constant value of reaction

70. Given below are two statements : one is labelled as **Assertion (A)** and the other is labelled as **Reason (R)**:
Assertion (A) : The ionisation of CH_3COOH is suppressed on adding CH_3COONa.
Reason (R) : Common ion effect is observed in the above case.
In the light of the above statements, choose the **correct** answer from the options given below:
(1) Both Assertion & Reason are true and the reason is the correct explanation of the assertion
(2) Both Assertion & Reason are true but the reason is not the correct explanation of the assertion
(3) Assertion is true statement but Reason is false
(4) Both Assertion and Reason are false statements

CC-473 CC-473

71. Solubility of $CuSO_4$ is maximum in
(1) H_2SO_4 (2) $Cu(NO_3)_2$
(3) NH_3 (4) Na_2SO_4

72. The ratio of salt to base is 10 : 1 for a basic buffer. If the pK_b of base is 5, then the pOH of buffer solution is
(1) 5 (2) 6
(3) 8 (4) 9

73. Given below are certain reactions. Identify the reaction for which $K_P \neq K_C$.
(1) $H_2O(g) + CO(g) \rightleftharpoons H_2(g) + CO_2(g)$
(2) $N_2(g) + 3H_2(g) \rightleftharpoons 2NH_3(g)$
(3) $H_2(g) + I_2(g) \rightleftharpoons 2HI(g)$
(4) $N_2(g) + O_2(g) \rightleftharpoons 2NO(g)$

74. In which of the following options precipitate of $CaCO_3$(s) ($K_{sp} = 4.7 \times 10^{-9}$) will be obtained when equal volumes of solutions are mixed?
(1) 10^{-4} M Ca^{+2} + 10^{-6} M CO_3^{-2}
(2) 10^{-6} M Ca^{+2} + 10^{-6} M CO_3^{-2}
(3) 10^{-5} M Ca^{+2} + 10^{-6} M CO_3^{-2}
(4) 10^{-4} M Ca^{+2} + 10^{-3} M CO_3^{2-}

75. Given below are two statements.
Statement I: The endothermic reversible reactions are favoured at low temperature and the exothermic reversible reactions are favoured at high temperature.
Statement II: When a system at equilibrium is disturbed by changing the temperature, it will tend to adjust itself so as to overcome the effect of change.
In the light of above statements choose the **correct** option.
(1) Both statement I and statement II are correct
(2) Both statement I and statement II are incorrect
(3) Statement I is correct but statement II is incorrect
(4) Statement I is incorrect but statement II is correct

76. Match the List I and List II.

	List I (Salt)		List II (solubility in terms of solubility product K_{sp})
a.	$BaSO_4$	(i)	$\left(\frac{K_{sp}}{108}\right)^{1/5}$
b.	Hg_2Cl_2	(ii)	$\left(\frac{K_{sp}}{27}\right)^{1/4}$
c.	$Ca_3(PO_4)_2$	(iii)	$\left(\frac{K_{sp}}{4}\right)^{1/3}$
d.	$Fe(OH)_3$	(iv)	$(K_{sp})^{1/2}$

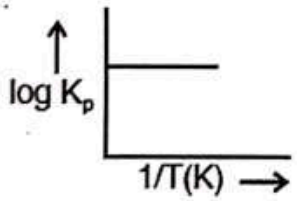

The correct match is
(1) a(iv), b(iii), c(ii), d(i)
(2) a(iii), b(iv), c(i), d(ii)
(3) a(iv), b(iii), c(i), d(ii)
(4) a(iii), b(i), c(iv), d(ii)

77. For an endothermic reaction the correct graph is

(1) 

(2) 

(3) 

(4) 

78. The reaction which is not affected by change in pressure is
(1) $N_2(g) + 3H_2(g) \rightleftharpoons 2NH_3(g)$
(2) $PCl_5(g) \rightleftharpoons PCl_3(g) + Cl_2(g)$
(3) $CaCO_3(s) \rightleftharpoons CaO(s) + CO_2(g)$
(4) $H_2(g) + I_2(g) \rightleftharpoons 2HI(g)$

79. Match the column I with column II.

Column I (Salt)	Column II (Type of hydrolysis)
a. $(NH_4)_2SO_4$	(i) Anionic only
b. CH_3COONa	(ii) No hydrolysis
c. CH_3COONH_4	(iii) Cationic only
d. Na_2SO_4	(iv) Both cationic and anionic

Choose the correct answer from the options given below.
(1) a(iv), b(iii), c(i), d(ii)
(2) a(ii), b(iii), c(iv), d(i)
(3) a(iii), b(iv), c(ii), d(i)
(4) a(iii), b(i), c(iv), d(ii)

80. At equilibrium, the concentration of $A_2(g)$, $B_2(g)$ and $AB(g)$ are 1×10^{-2} M, 2×10^{-2} M and 4×10^{-2} M respectively in a sealed vessel at 273 K. The value of K_C for the reaction $A_2(g) + B_2(g) \rightleftharpoons 2AB(g)$ is
(1) 4
(2) 16
(3) 6
(4) 8

81. If the solubility of a salt A_xB_y is s $molL^{-1}$, then its solubility product will be
(1) $y^y(s)^{x+y}$
(2) $x^x(s)^{x-y}$
(3) $x^y y^x(s)^{x+y}$
(4) $x^x y^y(s)^{x+y}$

CC-473 **82.** For the reaction CC-473
$2SO_2(g) + O_2(g) \rightleftharpoons 2SO_3(g) + xJ$
Favourable conditions for high yield of product is
(1) High temperature and low pressure
(2) Low temperature and high pressure
(3) High temperature and high pressure
(4) Low temperature and low pressure

83. A solution contains a mixture of Ag^+ (0.1 M) and Hg_2^{2+}(0.1 M) which are to be separated by selective precipitation. Calculate the maximum concentration of iodide ion at which only one of the metal ions gets precipitated? (Given: $K_{sp}(AgI) = 8.5 \times 10^{-17}$, $K_{sp}(Hg_2I_2) = 2.5 \times 10^{-26}$)
(1) 1.7×10^{-4} M
(2) 5.0×10^{-13} M
(3) 8.5×10^{-16} M
(4) 5.0×10^{-12} M

84. If for the reactions

$A \rightleftharpoons B$, $K_c = 10$,

$B \rightleftharpoons C$, $K_c = 5$ and

$C \rightleftharpoons D$, $K_c = 2$ then K_c for the reaction $A \rightleftharpoons D$ is
(1) 10
(2) 20
(3) 50
(4) 100

85. If at 25°C, K_a (HX) is 1×10^{-5}, the hydrolysis constant of NaX will be
CC-473 CC-473
(1) 5×10^{-7}
(2) 1×10^{-9}
(3) 5×10^{-8}
(4) 4×10^{-5}

86. If an aqueous solution of 0.2 M NH_4OH and 0.2 M NH_4Cl has pOH 4.7 then pK_b of NH_4OH is
(1) 8.3
(2) 3.8
(3) 4.7
(4) 5.2

87. Number of H^+ ions present in 10 ml of solution of pH = 5 is
(1) 10^{13}
(2) 6.022×10^{16}
(3) 6.022×10^{13}
(4) 6.022×10^{12}

Scanned with OKEN Scanner

88. When 5 moles of P and 2 moles of Q are mixed in 1 litre vessel, the following reaction takes place

$P(g) + Q(g) \rightleftharpoons 2R(g)$

The equilibrium mixture contains 0.5 mol of R. What is the value of equilibrium constant for the reaction?

(1) 0.03 (2) 300
(3) 2.5 (4) 3

89. Choose the incorrect match

	Conjugate acid	Conjugate base
(1)	HCO_3^-	CO_3^{2-}
(2)	$H_2PO_2^-$	HPO_2
(3)	$H_2PO_4^-$	HPO_4^{2-}
(4)	HPO_4^{2-}	PO_4^{3-}

(1) (1) (2) (2)
(3) (3) (4) (4)

90. The hydrogen ion concentration of 0.1 M solution of acetic acid, which is 20% dissociated, is

(1) 0.02 M (2) 2 M
(3) 0.2 M (4) 0.002 M

BOTANY

91. Read the given statements and state them as True(**T**) or False(**F**).

(A) In leaf, stem and root of both sunflower and maize, the epidermis is often covered with a waxy thick layer and possesses unicellular or multicellular hairs.

(B) The outermost layer of stele in roots of pea and mustard shows depositions of suberin in the form of strips.

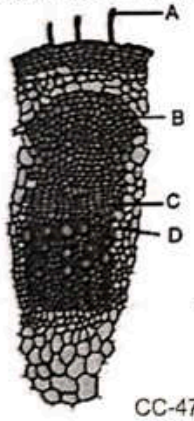

(C) Variation in the size of vascular bundles, presence of water containing cavities within vascular bundles are characteristics of monocot stem.

(D) The outermost layer in cortex of dicot stem is composed of living mechanical tissue.

Choose the **correct** option.

(1) (A)-F, (B)-T, (C)-F, (D)-T (2) (A)-T, (B)-F, (C)-T, (D)-F
(3) (A)-F, (B)-F, (C)-T, (D)-T (4) (A)-T, (B)-T, (C)-F, (D)-T

92. Identify the **correct** option for the given labels

CC-473

(1) 'A' represents epidermal elongations which perform the function of preventing water loss due to transpiration
(2) 'B' represents living component of stele present on the outer side of endodermis and below the phloem
(3) 'C' represents differentiated tissue that performs the function of transport of water and mineral
(4) 'D' represents the first formed primary xylem elements that lies towards the periphery of the organ

93. (a) Bulliform cells
(b) Epiblema
(c) Presence of cuticle
(d) Bean shaped guard cells

Which of the above features do **not** belong to dicot leaves?

(1) Only a (2) Only c and d
(3) Only a and b (4) Only d

94. Read the following statements.

(a) Monocotyledonous roots have fewer xylem bundles.
(b) Monocotyledonous roots do not show secondary growth.
(c) Dicot root has small pith.
(d) Cortex of stem consists of thick walled parenchyma cells.

Choose the **correct** statements :

(1) (a) & (c) (2) (b) & (d)
(3) (b) & (c) (4) (c) & (d)

95. Trichomes

(1) Are usually present in the root epidermis
(2) Are always unbranched and have stiff structure
(3) Are epidermal hairs on the stem
(4) Help in promoting water loss due to transpiration

96. Select the **incorrect** statement w.r.t Endodermis.

(1) It is the innermost layer of cortex
(2) In transverse section, the cells of endodermis appear barrel-shaped or oval-shaped.
(3) The cells constituting endodermis are living and may contain starch grains.
(4) Are present in monocot stem

97. The 'ring' arrangement of vascular bundles is a characteristic of

(1) Monocot stem (2) Dicot stem
(3) Monocot root (4) Dicot root

98. Select the **incorrect** statement w.r.t. anatomy of dicot root.

(1) Pericycle gives rise to lateral roots
(2) Vascular bundles are polyarch, *i.e.*, usually more than six
(3) Cambium develops at the time of secondary growth
(4) The outermost layer is epiblema

99. In monocot stem

(1) Vascular bundles are open and have cambium
(2) Pith is small and vascular bundle are arranged in radial manner
(3) Scattered vascular bundles are present
(4) Pericycle and endodermis are closely associated

CC-473 CC-473 CC-473 CC-473 CC-473
Aakash Medical/IIT-JEE/Foundations
Scanned with OKEN Scanner

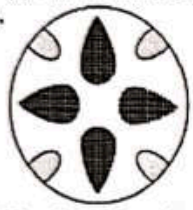

100. The layer of cortex in dicot roots that is characterised by the presence of casparian strips
(1) Is called pericycle
(2) Is comprised of a single layer of barrel-shaped cells without any intercellular spaces
(3) Leads to the generation of vascular cambium
(4) Contain trichromes

101. The type of vascular bundle in which xylem and phloem are situated at same radius, is commonly present in
(i) Root
(ii) Stem
(iii) Leaf
(1) (i) & (ii) (2) (ii) & (iii)
(3) (i) & (iii) (4) Only (i)

102. Internal structure of dicot leaf reveals the presence of
(1) Semi-lunar patches of sclerenchyma in extra stelar region
(2) Cambium between xylem and phloem
(3) Mesophyll divided into two regions
(4) Large pith in the vascular bundle

103. The layer of cells also referred to as starch sheath is
(1) Bundle sheath found in leaves
(2) Pericycle of dicotyledonous stem
(3) Cambial ring of dicotyledonous root
(4) Endodermis of dicotyledonous stem

104.

The above type of vascular bundles are found in
(1) Dicot leaf (2) Monocot root
(3) Monocot stem (4) Dicot stem

105. Choose the **incorrect** statement w.r.t. epidermis.
(1) Outermost layer of the primary plant body
(2) Made up of elongated and compactly arranged cells
(3) Generally forms a continuous, multilayered structure
(4) Often covered with cuticle

106. Read the following Assertion (A) and Reason (R) statements and choose the **correct** option.
Assertion (A): Vascular bundles in monocot leaves are nearly similar in size.
Reason (R): Monocot leaves possess parallel venation.
(1) Both (A) and (R) are true and (R) is the correct explanation (A)
(2) Both (A) and (R) are true but (R) is not the correct explanation (A)
(3) (A) is true but (R) is false
(4) Both (A) and (R) are false

107. Which of the following **cannot** be a function of ground tissue system?
(1) Storage of food material
(2) Formation of root hairs and lateral roots
(3) Mechanical support
(4) Fixation of atmospheric CO_2 into carbohydrate by photosynthesis

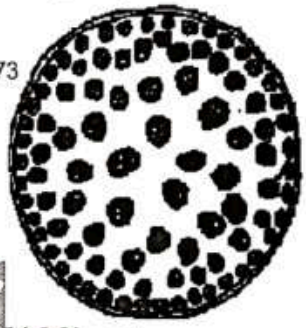

108. Following zonation is usually seen in ground tissue system

Epidermis (A), Hypodermis (B), Endodermis (C), Pericycle (D), Pith (E)

Out of A – E, which zone(s) is/are **not** seen in monocot stem but present in monocot root?
(1) A and E (2) C, D and E
(3) A only (4) E only

109. Read the given statements and select the **correct** option.
Statement A: The ground tissue system forms the main bulk of the plant and it is divided into three zones – cortex, pericycle, and pith in dicot stem.
Statement B: The vascular bundles form the conducting tissue and translocate water, minerals and food material.
(1) Only statement A is correct
(2) Only statement B is correct
(3) Both the statements are correct
(4) Both the statements are incorrect

110. The figure depicted below is transverse section of

(1) Monocot stem (2) Monocot root
(3) Dicot stem (4) Dicot root

111. Which of the given features are similar between conjunctive tissue and medullary rays?
(a) Parenchymatous
(b) Found in dicots
(c) Radially placed
(d) Can be photosynthetic
(1) (a) and (c) only (2) (a), (b) and (c) only
(3) (a) and (d) only (4) All (a), (b), (c) and (d)

112. All are related to guard cells, **except**
(1) In dicots, inner walls are thick
(2) These are sclerenchymatous
(3) Contain chloroplast
(4) Regulate opening and closing of stomata

113. Stelar region include all of the given, **except**
(1) Vascular bundles (2) Pith
(3) Endodermis (4) Pericycle

114. Sclerenchymatous hypodermis is found in
(1) Dicot stem (2) Monocot stem
(3) Dicot root (4) Monocot root

115. Ground tissue system in monocot leaf is represented by
(1) Palisade mesophyll (2) Spongy mesophyll
(3) General cortex (4) Mesophyll

116. Stomatal apparatus does **not** include
(1) Stomatal pore
(2) Guard cells
(3) Surrounding subsidiary cells
(4) Hypodermal cells

CC-473 CC-473 CC-473 CC-473
Aakash Medical/IIT-JEE/Foundations

Scanned with OKEN Scanner

117. Underground dicot roots do not possess
(1) Hypodermis (2) Cortex
(3) Endodermis (4) Protoxylem

118. Group of parenchymatous cells which lie between xylem and phloem of dicot roots is called
(1) Pericycle (2) Conjunctive tissue
(3) Medullary rays (4) Casparian strips

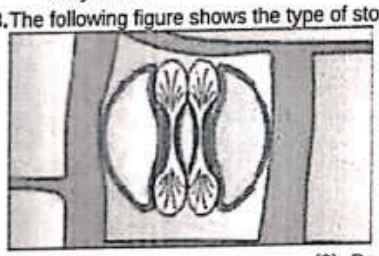

119. A few epidermal cells, in the vicinity of the guard cells become specialised in their shape and size, are known as
(1) Subsidiary cells (2) Complementary cells
(3) Bulliform cells (4) Passage cells

120. Phloem parenchyma is
(1) Present in all angiosperms
(2) Absent in all angiosperms
(3) Absent in most of the monocots
(4) Present in all monocots

121. Isobilateral leaves
(1) Are found in dicots
(2) Lack palisade parenchyma cells
(3) Have conjoint and open vascular bundles
(4) Have more stomata on upper epidermis

122. The primary adaptive advantage provided by bulliform cells in grasses during water stress is that they
(1) Enhance nutrient uptake from the soil.
(2) Increase the rate of photosynthesis by expanding the leaf surface.
(3) Reduce transpiration by causing leaf rolling to minimize exposed surface area.
(4) Promote rapid water transport to the leaf tips during dehydration

123. The following figure shows the type of stomata, seen in

(1) Grasses (2) Bean
(3) Gram (4) Pea

124. Read the following statements and select the **correct** option.
Statement A : Bulliform cells in the leaves absorb water and due to absorption of water, they become turgid.
Statement B : During insufficient water supply, bulliform cells lose the water and become flaccid due to water loss.
(1) Both statement A and B are correct
(2) Only statement A is correct
(3) Only statement B is correct
(4) Both statements A and B are incorrect

CC-473

125. Which tissue system in plants is considered as the fundamental tissue system?
(1) Epidermal tissue system
(2) Ground tissue system
(3) Vascular tissue system
(4) Conducting tissue system

126. The size of vascular bundles in a dorsiventral leaf is dependent on
(1) Size of lamina (2) Size of veins
(3) Number of stomata (4) Number of veins

127. Semi-lunar patches of sclerenchymatous pericycle is a feature of
(1) Dicot leaf (2) Monocot stem
(3) Dicot stem (4) Monocot leaf

128. The central most portion of stem of dicotyledonous plants is occupied by
(1) Vascular bundles (2) Pericycle
(3) Pith (4) Cortex

129. The epidermal tissue system comprises of
(1) Epidermal cells, stomata, subsidiary cells and epidermal appendages.
(2) Guard cells, stomatal pore, cortex and root hairs.
(3) Epidermal cells, stomatal apparatus, mesophyll and pith.
(4) Stomatal apparatus, medullary ray, trichomes and cortex.

CC-473 CC-473

130. Vascular bundles without cambium are called
(1) Closed (2) Open
(3) Endarch (4) Exarch

131. Tissue is a group of cells which
(a) Perform a common function.
(b) Are structurally always similar.
(c) Have a common origin.
(1) Only (a) and (b) are correct
(2) Only (a) and (c) are correct
(3) All (a), (b) and (c) are correct
(4) All are correct except (a)

132. In roots, ___A___ is/are impervious to water molecules. Select the correct option to fill A.
(1) Epidermis (2) Casparian strips
(3) Cortex cells (4) Pericycle

133. Vessels with narrow diameter are found in
(1) Protoxylem (2) Primary phloem
(3) Secondary phloem (4) Metaxylem

134. Palisade parenchyma is present
(1) Below the abaxial epidermis in monocot leaves
(2) Below the adaxial epidermis in monocot leaves
(3) Around the vascular bundles in dicot leaves and monocot leaves
(4) Below the adaxial epidermis in dicot leaves

135. When xylem and phloem within a vascular bundle are arranged in an alternate manner along the different radii, the arrangement is called
(1) Conjoint (2) Radial
(3) Collateral (4) Bicollateral

CC-473 CC-473

ZOOLOGY

136. Bones in human body which contribute to the formation of a hinge joint are
(1) Scapula and humerus
(2) Carpal and metacarpal of thumb
(3) Femur and tibia
(4) Atlas and occipital condyles

137. Innermost protective layer or meninges overlying human brain is .
(1) Arachnoid (2) Pia mater
(3) Dura mater (4) Dura-arachnoid

138. Which of the following bones does **not** participate in formation of rib cage?
(1) Collar bone (2) Ribs
(3) Sternum (4) Thoracic vertebrae

Scanned with OKEN Scanner

139. Which of the following relays impulses to the muscles called biceps?
(1) Sympathetic nervous system
(2) Parasympathetic nervous system
(3) Visceral nervous system
(4) Somatic nervous system

140. Bones serve all of the following functions **except**
(1) Support and protection
(2) Storage
(3) Transportation of substances
(4) Formation of blood cells

141. Scapula is a triangular flat bone situated in the dorsal part of thorax between the A and B ribs. Its C process articulates with D forming gliding joint. Choose the option which **correctly** fill the blanks A, B, C and D.

	A	B	C	D
(1)	2nd	7th	Spine	Vertebra
(2)	2nd	5th	Acromion	Sternum
(3)	2nd	7th	Acromion	Clavicle
(4)	2nd	8th	Spine	Clavicle

(1) (1) (2) (2)
(3) (3) (4) (4)

CC-473

142. A joint disorder in which inflammation of joint takes place due to accumulation of uric acid crystals is called
(1) Osteoporosis (2) Gout
(3) Myasthenia gravis (4) Tetany

143. Choose the **mismatch**.
(1) Ball and socket joint – Hip joint
(2) Hinge joint – Elbow joint
(3) Cartilaginous joint – Pubic symphysis
(4) Fibrous joint – Saddle joint

144. Progressive degeneration of skeletal muscle mostly due to genetic disorder is
(1) Muscular dystrophy (2) Myasthenia gravis
(3) Osteoporosis (4) Gout

145. Which of the following is **not correct** w.r.t. the neural system of the insects?
(1) A brain is present
(2) The neural system of insects is simply composed of the network of neurons only
(3) The neural system of insects is better organised than that of *Hydra*
(4) A number of ganglia are present along with the neural tissues in insects

146. In a resting neuron,
(1) Potential difference does not exist across axolemma as ion concentration is same in ICF and ECF
(2) Neural membrane is selectively permeable for all negatively charged proteins
(3) Permeability for potassium is higher than that for sodium ions
(4) Extracellular surface of axolemma is negatively charged

147. All of the following options are correct w.r.t. depolarization of a nerve fibre, **except**
(1) Opening of voltage gated Na^+ channels
(2) Rapid influx of Na^+
(3) Outer surface of neural membrane becomes more positively charged compare to inner surface
(4) Reversal of resting membrane potential

148. How many axons and dendrites are usually present in the multipolar neurons?
(1) One axon and one dendrite only
(2) One axon and two or more dendrites
(3) Two axons and one dendrite
(4) Two dendrites and three axons

149. Which of the following is not true w.r.t. electrical synapse?
(1) Transmission of impulse across an electrical synapse is faster as compared to chemical synapse
(2) Electrical synapse is rare in human nervous system
(3) Two neurons having electrical synapse communicate via tight junctions
(4) Synaptic cleft is greatly reduced in electrical synapse

150. Which of the following is the **incorrect** description of pelvic girdle?
(1) It consists of two coxal bones
(2) Each coxal bone is formed by the fusion of three bones-ilium, ischium and pubis
(3) The two halves of the pelvic girdle meet dorsally to form pubic symphysis
(4) A cavity called acetabulum is the site for articulation of thigh bone

151. Which of the following is part of PNS?
(1) Cerebrum (2) Spinal cord
(3) Nerves (4) Cerebellum

CC-473

152. Repolarisation of the axonal membrane results in development of
(1) Negative charge on the outer side and positive charge on the inner side of axolemma
(2) Positive charge on the outer side and negative charge on the inner side of axolemma
(3) Negative charge on both the sides of axolemma
(4) Positive charge on both the sides of axolemma

153. Which of the following parts of brain is concerned with regulating body posture, equilibrium and coordinated rapid muscular activity?
(1) Diencephalon (2) Pons
(3) Medulla (4) Cerebellum

154. The structures in a neuron that receive impulses from different sources and direct them towards the cell body are
(1) Axons (2) Synaptic knobs
(3) Dendrites (4) Myelin sheath

155. Select the **incorrect** match w.r.t. number of bones in man
(1) Collar bones – 2 (2) Floating ribs – 4
(3) Cranial bones – 20 (4) Acromian process – 2

156. A chemical synapse is formed by
(1) Synaptic cleft only
(2) Presynaptic membrane and synaptic knob
(3) Connection through gap junctions between presynaptic knob and postsynaptic membrane
(4) Presynaptic membrane, synaptic cleft and postsynaptic membrane

CC-473

157. Which of the following is not a paired bone?

CC-473

(1) Patella (2) Hyoid
(3) Parietal (4) Scapula

158. Amygdala is/has
(1) Component of limbic system
(2) Characteristic arrangement of grey and white matter just like cerebellum
(3) Tree-like arrangement of neurons in cerebrum
(4) Component of mid-brain

Scanned with OKEN Scanner

159. Brain stem includes
(1) Midbrain + cerebellum + medulla
(2) Pons + medulla + cerebellum + midbrain
(3) Hypothalamus + midbrain + medulla + pons
(4) Midbrain + pons + medulla

160. Synovial joints are **not** found in between
(1) Bones of cranium
(2) Carpals of wrist
(3) Humerus and pectoral girdle
(4) Carpal and metacarpal of thumb

161. Centres which control respiration, cardiovascular reflex and gastric secretions, are located in
(1) Cerebrum (2) Cerebellum
(3) Medulla oblongata (4) Pons varolii

162. **Assertion (A)** : Conduction of nerve impulse through neurons is unidirectional.
Reason (R) : Neurotransmitters are released from axon terminals, never from dendrons.
In the light of above statements, select the correct option.
(1) Both Assertion & Reason are true and reason is the correct explanation of the assertion
(2) Both Assertion & Reason are true but reason is not the correct explanation of the assertion
(3) Assertion is true statement but Reason is false
(4) Both Assertion and Reason are false statements

163. A 7 year old boy is suffering from an auto immune disorder affecting neuromuscular junction leading to fatigue, weakness and paralysis of skeletal muscles.
Select the correct answer for the given diagnosis.
(1) Tetany (2) Muscular dystrophy
(3) Myasthenia gravis (4) Arthritis

164. All of the following are controlled by hypothalamus, **except**
(1) Urge for eating (2) Body temperature
(3) Voluntary movements (4) Urge for drinking

165. Read the following statements and choose the **correct** option.
Statement I : Myelinated nerve fibres are found in spinal and cranial nerves.
Statement II : Unmyelinated nerve fibres in PNS are not enclosed by Schwann cells.
(1) Statement I is incorrect but statement II is correct
(2) Statement I is correct but statement II is incorrect
(3) Both statements are correct
(4) Both statements are incorrect

166. The $Na^+ - K^+$ pump transports 3 __A__ outwards for 2 __B__ into the axon maintaining the polarisation state when the neuron is in __C__.
Choose the option that **correctly** fill the blanks A, B and C.
(1) K^+, Na^+, Depolarisation state
(2) K^+, Na^+, Repolarisation state
(3) Ca^{+2}, K^+, Repolarisation state
(4) Na^+, K^+, Resting state

167. Select the **incorrect** statement w.r.t. skeletal system of humans.
(1) It consists of framework of only bones.
(2) Bone and cartilage are specialized connective tissue.
(3) Matrix of cartilage is pliable due to chondroitin salts.
(4) Bones have a very hard matrix due to calcium salts in it.

168. Choose the **odd** one w.r.t. cranial bones of humans.
(1) Parietal (2) Temporal
(3) Mandible (4) Occipital

169. Which of the following is a **correct** match w.r.t. human bone and it's feature?
(1) Hyoid – L–shaped
(2) Ribs – Bicephalic
(3) Coxal bone – Glenoid cavity
(4) Sternum – Neural canal

170. Select the set of bones from the options given below which are not the part of axial skeleton.
(1) Sphenoid and ethmoid bone
(2) Coxal and patella bone
(3) Sacrum and coccyx
(4) Maxilla and mandible

171. In an adult human, the total number of facial bones are equal to the total number of bones in
(1) Right hand (2) Thoracic cage
(3) Phalanges of right hand (4) Wrist of both hands

172. The type of joint present between carpal and metacarpal of thumb is
(1) Pivot joint (2) Gliding joint
(3) Saddle joint (4) Hinge joint

173. In humans, the bipolar neurons are found in the
(1) Cerebral cortex (2) Skin
(3) Retina of eye (4) Ear pinna

174. The right and left cerebral hemispheres are connected by a tract of nerve fibres called
(1) Cerebral aqueduct (2) Corpus callosum
(3) Thalamus (4) Brain stem

175. The process through which two or more organs interact and complement the functions of one another is called
(1) Coordination (2) Control
(3) Integration (4) Reflex

176. Brain stem connects
(1) Medulla oblongata and pons only
(2) Midbrain, cerebellum, only
(3) Two cerebellar hemispheres
(4) Brain with spinal cord

177. The number of cranial bones are equal to the number of
(1) Facial bones
(2) Ankle bones in each hind limb
(3) Total number of girdle bones
(4) Number of carpals in each wrist

178. The part of the brain that is located between the thalamus/hypothalamus and pons is
(1) Cerebellum (2) Midbrain
(3) Medulla (4) Cerebrum

179. Select the incorrect statement w.r.t. adult humans.
(1) Our vertebral column is formed by 26 serially arranged units called vertebrae
(2) The vertebral column in adults is differentiated into $C_7T_{12}L_5S_1C_1$
(3) Sternum is a flat bone on the dorsolateral side of thorax
(4) First vertebra is atlas and it articulates with the occipital condyles to form a condyloid joint

180. All of the following are parts of forebrain, except
(1) Cerebellum (2) Corpus callosum
(3) Association areas (4) Hypothalamus
